

Transforming how IT infrastructure is delivered and managed

Breaking the norms of outsourced IT support to accelerate cloud adoption.

IT outsourcing is evolving

Like many infrastructure managers, you may feel trapped by your data center support agreements. You know that putting workloads in the public cloud:

Until now, moving to the cloud mid-contract risked financial penalties and squandered data center investments.

64%

of IT decision makers say cloud adoption positively impacts enterprise revenue

Innovation the industry has been waiting for

Atos and AWS have teamed up to turn outsourcing convention on its head.

With its CloudCatalyst initiative, Atos modernizes mid-term support contracts to embrace cloud migration. Contracts may include financial incentives as well as AWS Cloud services to minimize costs.

Three steps to cloud transformation

With inside knowledge of its customers' environments, Atos applies advanced tools and expertise for the lowest cost migration with minimum risk and maximum convenience.

Tackling stranded assets

Following cloud migration, Atos evaluates your on-premise portfolio and offers options for buildings, contracts and devices that further reduce migration costs.

Five benefits of CloudCatalyst migration

Up to 80%

lower carbon footprint of a workload when moved from on-premise to AWS Cloud

Why CloudCatalyst is so ground-breaking

The pioneering Atos and AWS collaboration goes further than any other outsourcing initiative. Having largely built its business by managing data centers, Atos now focuses on a future free of them. That depth of commitment is unrivalled in the industry.

Leading cloud expertise

Atos is running a major upskilling program to gain tens of thousands of new AWS certifications for its engineers.
