Sargonic Names in the Diyala Region and Beyond

Paolo Gentili

§0. Introduction[1]

§0.1. In this study we should approach two main research questions. First, it is intended to provide a general framework for the Old Akkadian onomasticon. Secondly, it is necessary to inquire about a number of specific issues, as, for example, the geographical scope of the Diyāla region. What exactly is meant by the region of the "Diyāla river"? From the point of view of this study the Diyāla region can be perceived in a wider scope. Starting from modern Baghdad at the convergence of the Tigris river, the Diyāla region extended towards the East, and North-East, to Sulaimanija, along the ancient Durul (the present Diyāla) river. Strictly speaking, that is not part of Mesopotamia anymore, if considered in its literal meaning "between the rivers"; nonetheless, in terms of its cultural scope it fully belonged to it. Among the cities known from the Old Akkadian period are Tell Harmal (ancient Šaduppûm), Ishchali (Nērebtum), Khafajah (Tutub), Tell Dhiba'i (Zaralulu), Tell Asmar (Ešnunna), and Tell Es-Sib/Haddad (Mê-Turān). To these cities one should add another site, Tell Suleimah,[2] whose ruins lie not far from Tell Asmar (no more than 50 km north-east), but which belongs to a different geographical region, the Himrin.[3] Nevertheless, judging from the database of names the latter showed clear affinity to the settlements of the Diyala region. This addition may provide a structural comparison of the two areas in question and allow for a northeastern perspective that is still in need of more clarification in terms of personal names and chronology.[4]

§0.2. All the above-mentioned cities have been, to a greater or lesser extent, involved in the shaping of Mesopotamian history. Some (especially Tell Asmar/Ešnunna) gained important roles in the socio-political framework of the region. The *Old Akkadian Onomatology Database* is based on the texts found in these cities during archaeological work, or on texts that can be assigned to them, but lack any provenience.

§0.3. A further issue entails the chronology of the Diyāla region. The Old Akkadian period as defined by the usage of Old Akkadian writing, can widely be defined as running from the earliest period of Mesopotamian history down to the end of the Ur III dynasty; in the middle chronology that would encompass the second half of the third millennium to the very beginning of the second. However, from both a linguistic and an epigraphic point of view, it should be divided into three distinct periods: Pre-Sargonic (until Lugalzagesi), classical Sargonic (including the beginnings of the Akkadian Dynasty under Sargon), and finally the Ur III period.[5]

§0.4. Since many of the texts quoted in this study are unprovenanced, they cannot easily be exploited in terms of geography or chronology. In such cases these texts are attributed based on epigraphic and linguistic criteria; further studies will enrich our understanding of Old Akkadian epigraphy and linguistics. A majority of the texts,

---

[1] The data for this study derives from the author's *Old Akkadian Onomatology Database*.

[2] There is no agreement on the ancient name of Tell Suleimah (Awal, Batir or GA.BA/Dūrum?). For a discussion see a forthcoming study by the author. In the meantime note, in particular, Visicato 1999; Rasheed 1981a and Rasheed 1981b.

[3] See Gentili 2002: 145, note 39, with previous literature.

[4] From an archaeological point of view, a link between these two areas has been proposed by McGuire Gibson; see Gibson 1981 and further studies quoted below.

[5] I follow here Gelb 1952: 1. For a general dating of the period to 2300-2150 B.C. see Foster 1982: 299; see further Hilgert 2003: 1ff. and note McMahon 2006: 4 for a more general definition of the period.

however, may be assigned with some confidence to the classical Sargonic stage of the Old Akkadian period.[6] Therefore, all the texts under consideration here will be referred to as 'Sargonic'.

§1.1. *Historical data*
In terms of historical facts, very little is known about the Diyala region during the Sargonic period. We owe that fact to the preponderance of administrative records. In order to proceed with an investigation of the socio-historical documentation the first step will be to determine the provenience of the documents. This is easily done when stratigraphic information is available, less so with texts acquired on the antiquities market.

§1.2. *Khafajah*
We have stratigraphic information about the subsequent text finds from Khafajah:
– Two royal inscriptions of Rîmuš either on a vase or fragments.[7] They were found not far from the Sîn temple and date to the (early?)[8] Akkadian levels of the Oval Temple.[9] The texts mention the conquest and the booty of Elam and Parāšum.[10]
– Fragment of an inscription of the same king found on a calcite vase fragment.[11] Its find spot belongs to the same level as the other Rîmuš inscriptions.[12]
– A seal mentioning king Šarkališarri possibly on a mace-head that belong to an unknown official.[13]
– An inscription of an unknown king[14] from a vase found in the Akkadian levels of the Oval Temple.[15] The inscription presumably mentions the city Akkad.

– A bowl inscription of the Akkadian king Narām-Sîn[16] found in the Akkadian levels of the Oval Temple.[17] The text just mentions the king's name.

§1.3. *Tell Asmar*
The ancient city of Ešnunna yielded the following text finds:
– A doubtful date formula of king Šarkališarri (MAD I 305).[18]
– A seal impression of an unknown official dating to the last Akkadian ruler Šū-Durul.[19]
– A text from the antiquities market mentioning a ruler of Ešnunna that can be attributed to the Akkadian dynasty. Thorkild Jacobsen[20] read the ruler's name 'Enbiq-Ḫaniš, *išakku* of Ešnunna'[21] (in contrast to Lutz[22]).
– A school text[23] with a copy of a legend that was attributed to the Akkadian king Narām-Sîn by by Gelb and Kienast.[24] The text mentions Ipḫur-Kiš and his rise to kingship, the king of Ur Lugal-ane, as well as a specified 'Urukean.'[25]

§1.4. *Tell Suleimah*
The administrative texts of Tell Suleimah mention an ENSI$_2$ without providing a clear chronological framework:[26]

[6] The database offers the field "Notes," which on the one hand informs about date and provenance of a given text and provide bibliographical information on the other. In the case of Tell Suleimah it should be noted that the textual record originates from level IV, which reaches deep into the Old Akkadian layer. For a superficial dating of the economic texts see Gelb 1952: 7, note 4.

[7] Kh II 94 and Kh I 381, edited as E2.1.2.15 in Frayne 1997, with bibliography (but corrected to Kh I 381).

[8] As discussed below, "early" does seem inappropriate based on the modifications done to Gibson's chronological table.

[9] K 45-2 (top layer) and K 45, Oval III.

[10] For the chronological attribution of the finds see Frankfort 1934: 68.

[11] Kh II 104 = Frayne 1997: E2.1.2.20, ex.4 (bibliography).

[12] J 45-2, Oval III.

[13] A 7162, unpublished.

[14] Kh II 162 = Frayne 1997: E2.0.0.1008 (bibliography).

[15] K 45, Oval III.

[16] Kh II 79 = Frayne 1997: E2.1.4.40 (bibliography).

[17] K 45, Oval III.

[18] A 7844 = Gelb 1961: 204, 2b; This text is not included in the present list, because the reading offered by Gelb is not complete. Another date formula of this king is attestation in a document from Tell Agrab: MAD 1 268.

[19] As 31:627 (TA 701) = Frayne 1997: E2.1.11.2002 (bibliography). See Gibson 1982: 533: House IVa, Akkadian level.

[20] Jacobsen 1934: 2, 2° and note 3 and Lutz 1928: note 83 rev.iii 42-46 (quoted in Gelb 1961: 10 d).

[21] En-bí-iq-d³a-ni-iš$_4$. For the correct spelling of Ešnunna in this inscription see also Jacobsen 1934: 1.

[22] EN NE.GÁL d³a-ni-gè.

[23] TA 1931,729 (from house XIX Sect. H/J of Stratum IVb): Frayne 1997: E2.1.4.7, with bibliography.

[24] Gelb and Kienast 1990: 272-3, Narāmsîn C 15.

[25] For a first chronological framework see Frankfort 1934: 2ff. (included in Gibson's article).

[26] Evidence may be found on a local level for the Old Babylonian period, for which relations are attested to cities quoted in the lists from Tell Suleimah and other local sites, as Mê-Turān (see my work about Tell Suleimah mentioned in note 1). McMahon 2006, 3, note 3 states: "...excavations at ..... Tell Sleima ..... have produced mate-

- Belili is mentioned in the total of an account of field quantities as ENSI$_2$ of an unknown locality; the text is referring to the village/city of Ababi.[27]
- I-ŠE$_3$-GU-UB ENSI$_2$ of Ibrat and Išub-Anum ENSI$_2$ of Šabue are mentioned in a list of personal names together with the name of the village/city of Urig.[28]

The qualification ENSI$_2$ is clearly used to denote a local administrator.[29] The three individuals cannot be linked to other persons in the database.[30]

§1.5. *Unknown provenance*
- Although Ignace Gelb gave as generic provenience 'Diyāla district', an inscription of king Elulu can be considered unprovenanced.[31]
- A couple of date-formulas of Narām-Sîn that record the year when the Akkadian king battled Simurrum and captured Baba, ensi of Simurrum, and Dubul, ensi of Arame, as well as the "year when the king dug the canals Nakabtum and UD.KIB.NUN, defeated the country of Šunaminda and killed Ur-Nintu."[32] They probably come from Tell Asmar and Khafajah.
- A date-formula of the same king quotes the "year of Simurrum."[33] It probably refers to another year name than mentioned above. It occurs in a text dealing with

rial of Akkadian date, but their placement within that period suffered from the lack of a full independent southern (Mesopotamian) sequence for comparison ...."

[27] Rasheed 1981, n.36.

[28] Rasheed 1981, n.3.

[29] As Rasheed 1981b, 56 states even for texts dated to the Akkadian period "we cannot give them an exact date within the Akkadian period." The extremely uncertainty of their exact chronological collocation inside this period as well as the affinity of the personal names attested there compared to the evidence in the Diyāla region, just allow for including them into a wider chronological framework, but not more. However, they 'at least' belong to the same period as, for instance, the texts published in MAD 1.

[30] Visicato 2000, 222ff., mostly based on the sign ŠU.NIGIN, assigns to the texts from this site a date between the Umma A and B periods, notably between the reigns of Rîmuš and Narām-Sîn: "Probably ... to the beginning of the reign of Narām-Sîn ... prior his administrative reform." This opinion supports and, in part, confirms what we said in the previous note.

[31] For an interpretation of the name Lilul-dan = Elul-dan = Elulu see Gelb 1961, p.204, 1 (Levy 1935-1936, 281); see also Sollberger and Kupper 1971, p.113 IIA6.

[32] Gelb 1952, nn. 217, 220, 231 and 236 (= Kh.34,22; A22021; A22025, A22030+A22032, IM 31227 and a quotation from the same group of texts but given only by Sommerfeld 1999: IM 31224.

some workers and officials from an uncertain place in the Diyala area.

§2.1. *Historical perspectives*
§2.1.1. Even if personal names collected in the database correspond to those of known contemporaneous officials such as, for example, Ša-ki-bêlī,[34] Kirbānum,[35] and Lipit-ili,[36] who have been identified as officials in the reign of Šarkališarri,[37] it is by no means certain that they are identical. Furthermore, since we are dealing with administrative texts, they are of little use for historical investigations. Consequently, 'historical' information unrelated to local history is not helpful for a reconstruction of the situation in the Diyala region or in the adjacent region of Tell Suleimah; It merely testifies the presence of Akkadian king(s) in the area. Just an unprovenanced text, supposedly from Tell Asmar, attests to a local king named Enbiq-Ḫaniš. Additionally, documents from Tell Suleimah yielded references to an ENSI$_2$.

§2.1.2. Nevertheless, some years ago[38] McGuire Gibson attempted a new, positivistic, evaluation of the archaeological documentation for the Akkadian period in the Diyala region.[39] The author rejected the so-called Proto-imperial period that previously has been confused with early Akkadian levels.[40] At least for the Diyala sites, his approach thus reduces the chronological extent of the Early Dynastic IIIb period and limits it to a rather short phase.[41]

§2.1.3. It further leads to a firmer attestation of settlements in the Akkadian period, which may be compared to the situation at other places (e.g., Inanna temple at Nippur).

§2.1.4. Let us link Gibson's results to our short summary of historical data from the Diyāla region. Our most important clues about the chronology originate from the

[34] IM 31228 or NBC 10920.

[35] TA 1931, 1-1A-6A and 10A; A7822-7875-7888.

[36] Rasheed 1981, n.8.

[37] MAD 2, p.203, 3-8. It is purely coincidental that the afore-mentioned officials date to the same Akkadian king.

[38] Gibson 1982, 531ff.

[39] About the problem of the Early Dynastic-Akkadian transition see also Gibson and McMahon 1995 and 1997.

[41] See also Gibson 1995, 3.

levels Oval III in Khafajah[42] and Stratum/Houses IVa-b in Tell Asmar.[43] Gibson's table contains a small time gap between Khafajah Oval III and Tell Asmar House IVb. For the former an Early Akkadian date is given, for the latter a Late Akkadian. Whereas the levels Houses IVb, in particular, have been dated by Gibson based on internal documentation,[44] the material from level Oval III in Khafajah, that originally has been dated based on a close comparison to the remains of Houses I,[45] was criticised by Gibson himself,[46] who puts its dating closer to the Early Akkadian period.

§2.1.5. On the basis of the relative homogeneity of the material at hand and concurring with Gibson's view that level IVb is certainly contemporary with Narām-Sîn,[47] we may modify his table. Thus levels IVb and Oval III are now closer to each other; the latter is now either closer to the Late Akkadian level or it may be interpreted as a transitional level. The table proposed by Gibson[48] can hence be modified (see **table 1**).

§2.1.6. In the continuity of level Oval III we might suggest the following subdivision, which, as shall be discussed, has no stratigraphic support: IIIa is a clear Early Akkadian phase, substantiated by finds dating to the reign of Rîmuš; IIIb contains a Narām-Sîn inscription in locus K 45.

42 See the royal inscriptions by Rîmuš and Narām-Sîn.

43 Narām-Sîn school text (IVb) and Šū-Durul seal (IVa). For the stratum IVb, Gibson 1982, p.533, note 16, records even several clay sealings belonging to UŒium, probably an official of the reign of Narām-Sîn and nine Sargonic texts, a personal communication, this last one, from (and dated by) Gelb. Between the eight Sargonic texts (not historical) quoted by Gibson as coming from this level, we can indicate the one mentioning Tudanapšum, a probable daughter of Narām-Sîn.

44 Even if the Šu-Durul seal is said to come from a dump and not exactly in this level. Could it come from IVb level, that is, from a level closer to Narām-Sîn period?

45 Gibson 1982, 536.

46 Gibson 1982, 536 states: "... I suggest that the commendable caution of the excavator might have led him to assume that any post-Early Dynastic material found in these buildings must have been intrusive, rather than a sign of a later date or at least of continuing occupation ...."

47 Gibson 1982, 533.

48 Even considered as intrusions by Gibson, these 'historical' finds deserve a better consideration for the dating of the level: "... Stone objects, inscribed with the names of Rimush and Naram Sin, although thought to have been intrusions, may in fact date the level and contemporary Houses I" (Gibson 1982, 536).

	Oval	Houses	Northern Palace
Akk. Late	III(b)	IVa IVb	Main level, N. Pal., Cont. Hses.
Early	III(a)	Va Vb	Earlier N. Pal., Cont. Hses.

Table 1: A new setting[49]

§2.2. *A new setting?*

§2.2.1. Taking the previous assumptions into account,[50] - we should also add the school text that can be dated to the reign of Narām-Sîn - levels IVa and IVb in Tell Asmar should be separated more radically. Following Gibson's evaluation the former should be dated later to the Late Akkadian period. That leaves the latter to a little earlier stage of the same period. In order to put levels Oval III and Houses IVb side by side, it should be considered that level Oval III, K-J 45 contains three inscriptions by Rîmuš, which can be seen as a plausible link to an earlier stage of the Akkadian period. In other words, the Narām-Sîn inscription anchors level Oval III to the Late Akkadian period. We must strongly remind that the attestation of Rîmuš just stands firmly on the early phase of the Akkadian period. In our opinion, level Oval III, K-J 45 at Khafajah, where the Narām-Sîn inscription has been unearthed, can be reasonably interpreted as being a transition level between the Akkadian and Late Akka-

dian periods. **Table 2** gives the situation more accurately in including the stratigraphic information of the finds.

49 See Gibson 1982, 537 for the legend.

50 See, in particular, footnote 48, where these finds are not simply considered 'intrusions'.

§2.2.2. At least for level Oval III, K 45 our assumption is substantiated by the inscriptions of Narām-Sîn and Rîmuš. Given the dates assigned to the texts by the various authors[51] the finds from Khafajah would date to the reign of Narām-Sîn and those from Tell Asmar[52] to the time between Narām-Sîn and Šarkališarri, but with some probability for the former one. From an archaeological point of view the "shallow and badly eroded"[53] situation as found by Gibson for levels Oval III and Houses I at Khafajah advise some caution about the stratigraphic situation for the finds of locus K 45 at Khafajah.[54] This uncertainty, expressed by the same authors, hampers any historical reconstruction. However, these difficulties can be limited twofold: Firstly, taking the stratigraphic distribution for granted, notwithstanding its general ambivalence, our hypothesis may be criticised, but could be taken into consideration. Secondly, if the location proved to be incorrect, it must be questioned, where the inscriptions come from? If they originate from the Sîn temple, we would like to know their stratigraphic location. If they indeed precede a Late Akkadian level, our hypothesis of a closer relation between levels Oval III and Houses IVb seems to be strengthened, because upon inspection of the excavation reports, there is no sign of any intrusions of levels Oval III, K-J 45 among earlier levels. On the contrary, if intrusions do exist, it seems more likely that they derive from later levels.[55] All these considerations are a work in progress.

§3.1. *The personal names*

§3.1.1. From a general point of view the names collected in the database are to a great extent, Akkadian[56] and thus of a Semitic origin.[57] Their formation can be compared to

other contemporaneous areas in the vicinity.[58] The language of the texts is mostly Akkadian. There is, of course, a certain number of Sumerian names, but they do not exceed the usual share as found in this period; they are, in general, consistent with the stratum of other areas close by.[59] However, we attempt to adapt Benjamin Foster's point of view in this study,[60] because our considerations are based on a different system of counting: In contrast to Foster[61] we reckon any occurrence of any single name typology as 'one case'. For instance, we count the occurrence of names like Dada or Zuzu only once, even if these names are attested more frequently than others. The main reason for this choice is the fact that certain names occur frequently and others less so. This happened with no clear indication in many cases, except for the inequality of the documentation. We are conscious, however, that these occurrences must be recorded and should be considered a result of the practical usage of names. As a consequence, it could lead to disparity when favouring a given name or a given ethnicity, in particular, over another.[62] In fact, there is no certainty whether the frequency of a given name in our documentation derived from its more extensive usage

will be more common in the ensuing Ur III period (see Buccellati 1966): The first one (four attestations) might be either an hypocoristic form or, following Buccellati, a tribal name; the second one probably referring to a woman may derive from a male form Iblanum ('the man from Ibla') and is attested once as owner (probably chief-clan or, as woman, linked to a chief clan owner) of Tutu in a sale of fields. The mention of a woman from Ibla in this region in this period is quite indicative! The third name is an hypocoristic form of the word for 'name' (here in the sense 'posterity'). It appears once in a legal document probably from Tell Asmar, as witness and owner (chief-clan) of Bilzum. If indeed Amorite, their presence in the documentation of this period and in this region might favour a slight pre-dating of this ethnic group in central Mesopotamia.

---

[51] See Text Table in the Database.

[52] For the dating of the texts from Tell Suleimah to the time between the reigns of Rîmuš and Narām-Sîn see Visicato 2000.

[53] Gibson 1982, 536.

[54] It should be noted that the two rather damaged fragments attributed to Rîmuš originate from a 'layer of potsherds and flat baked bricks' (Frankfort 1934b, 74), which is located not inside the Oval temple, but 'not far from the Sîn temple' (Frayne 1997, p.65, 15). Thorkild Jacobsen, however, states that these fragments "...were found in secondary context. They may therefore well have come from refuse discarded from the near-by Sin temple."

[55] The Rîmuš fragment Kh II 94 comes from the 'top' of the layer.

[56] With Gelb 1957, viii: "...The term 'Akkadian' embraces probably more than the term implies ...".

[57] For instance: Aḫātum, Aḫu-ṭâb, Bêlī-abum, Ilī-aḫī etc. In Tell Asmar even three possible Amorite names - these are Amurum, Iblanitum and Šamanum - are attested, which

[58] Like Mari, to some extent also Ebla or Kish.

[59] See, for instance, Umma or Girsu.

[60] Foster 1982, 297ff. In this study Foster's system is used for an analysis of the ethnic background of the names, counting the names on the basis of the following percentages: Sumerian, Akkadian, Reduplicated (that is AA or ABB) and Unassigned.

[61] Ivi, p. 303.

[62] For the problem of ethnicity in this period and its implications, see Foster 1982, 297-98, notes 1-6. The term ethnicity is used here in the sense of belonging to a specific tradition regarding its social, political and economic characteristics. With Foster it can be assumed, though with doubts, that this may be reflected, to some extent, in the distribution of names (see notes below).

or is based by mere archaeological accident.[63] We would like to propose, nonetheless, the possibility that a more frequent usage of a given name is to be considered to reflect the actual situation, as approached by Foster's study. Therefore, we offer two different shares: List A, below, just include name types. That leads to a slight variation compared to the shares[64] given by Foster for the same period in this region (his results are given in brackets):[65]

List A

Akkadian	72.2 %	(79 %)
Sumerian	11.5 %	(5 %)
Reduplicated	5.5 %	(12 %)
Unassigned	10.5 %	(4 %)

§3.1.2. The scheme given above needs some clarification. The share of both Akkadian and Sumerian personal names include all references toclear as well as less clear instances of either Akkadian (Semitic) or Sumerian names. Of course, this does not exclude the possibility that various names could have had another origin.[66] The third category contains personal names, whose linguistic origin is problematic.[67] It should be noted, however, that some of those names could be assigned to one or another category.[68] The last category represents the share of personal names in the database that, in our opinion and upon careful consideration, could have not been assigned to

any of the previous categories.[69] At first glance, the slight decrease of the Akkadian share and a substantial increase in the Sumerian one, compared to Foster's evaluation is remarkable. The differences to his statistics are justified by the fact that we assigned personal names to the Sumerian category that have been ascribed to the third category by Foster.[70] Furthermore, we classified various names as unassigned, which Foster included among Akkadian names.[71] In any case the situation is still representative on a regional level.

§3.1.3. List B contains all quotations of any single name in our documentation and thus is quite similar to Foster's approach:

List B

Akkadian	76.3 %	(79 %)
Sumerian	8.4 %	(5 %)
Reduplicated	9.0 %	(12 %)
Unassigned	6.1 %	(4 %)

§3.1.4. As we can see, the diffusion of the names influences in a perceptible manner our list. The slight differences between these results and Foster's approach are due to the same reasons explained above but here the comparison is much more substantial. The differences between our two lists are peculiar: decreasing of Sumerian and Unassigned names[72] and increasing of Semitics and Reduplicated. Probably, the better diffusion[73] of some typical Semitic typologies (all the ones with Ilum-, for instance), plays a decisive role in this list.

§3.2. *Onomatologic conclusions*
§3.2.1. In pursuing this line of investigation, we may come to some conclusions based on a close-up examination of the data at hand. It is, however, noteworthy to point out that our documentation suffers from a series of limitations, which shall be summarised here: Firstly, we have to cope with the incompleteness of the data, which is essentially due to the finding conditions. Secondly, the

---

[63] Possible repetitions of a given name in a text are taken as one attestation and hence do not affect the outcome of this study.

[64] The numbers given here aim at approximating the real numbers as close as possible.

[65] It should be noted that Foster did not include data from Tell Suleimah, which is considered in these numbers.

[66] See, for instance, restored names. Incomplete names, which in their majority appear to belong to Semitic ones, are excluded here.

[67] Following Foster: AA or ABB. This is the so-called 'Bana-na' language (see Rasheed 1981b, 56 quoting Gelb: Mumu, Zuzu, Igigi, A²u²u, Dagaga, Ilulu, Ilala, Imkuku, Balulu, Irrara etc.), which is only attested in personal names and represents an unknown Diyāla language that still needs to be identified. The attested forms, whether or not they represent a 'real language', may just belong to a branch of the local Akkadian dialect. It is worth noting that whereas such forms are very rare in Iraq's south, they are relatively common in the central area in the Akkadian period. Due to the lack of a more thorough analysis of attestations in other Akkadian archives, it is currently not possible to draw their development from the area of the Himrin towards the Diyāla, as stated by Rasheed.

[68] In our opinion, Sumerian names appear to predominate.

[69] This category extends Foster's classification.

[70] In fact, the two categories change with the same proportion.

[71] Since Foster does not give any list of names for the Diyāla region assigned to his categories. It is not possible to be more sure about this, because Foster doesn't give any specific list of names subdivided by category, for the. Anyway, these two categories, Akkadian and Unassigned, change in the same way than the two quoted before.

[72] But with a percentage always greater than the one offered by Foster.

[73] Even if we suppose, for a certain part of them, an accidental cause.

onomatological analysis is prone especially to ambiguity as well as the tentative interpretation of many names; we tried to reduce this ambiguity by reckoning such names as Unassigned. Last but not least, the rather varying sizes of archives put some limitations to our analyses as well. Nonetheless, it is worth to extrapolate the relevant information from our documentation and present preliminary results from two sites in the Diyāla region and one that lies beyond:[74]

Table A

Site	Akk.	Sum.	Redupl.
Typological Diyāla	72.2	11.5	5.5
Tell Asmar	75.2	8.4	3.1
Khafajah	69.1	13.2	6.1
Tell Suleimah	64.6	16.0	4.9

Table B

Site	Akk.	Sum.	Redupl.
General Diyāla	76.3	8.4	9.0
Tell Asmar	72.5	5.9	6.6
Khafajah	70.9	9.1	8.3
Tell Suleimah	69.6	10.6	10.4

§3.2.2. At first glance,[75] the following trends can be observed:[76]

§3.2.3. Table A
At Tell Asmar we encounter an increase of Akkadian names, but a parallel decrease in the Sumerian share. In contrast to that, at Khafajah and at Tell Suleimah, in particular, the situation is reversed with a progressive decrease in the Akkadian share and a strong increase of the Sumerian part. In considering the three main sites in relation to each other we have a progressive decrease of the

Akkadian component and a similar increase of the Sumerian share. At least at Tell Asmar and Khafajah names that have been assigned to the Reduplicated category, increase similarly to the Sumerian share.
if the data referred to Tell Asmar and Khafajah, in relations to the Diyāla, could be understood as due to the mere variation of internal occurrences,[77] the percentage we achieve for Tell Suleimah is, in our opinion, clearly depending even from other elements (a more peripheral position of the site, that is a less, in chronological meaning, Semitic distribution?), that, in any case, is still to be investigated: its data are closer to the Khafajah numbers, even if with a lesser degree;
from a general point of view, it looks like the parallel variation between Sumerians and Reduplicated, could be understood as an internal affinity among these two typologies. In few words, perhaps the Reduplicated names could be referred more to the Sumerian component of the population that to the Semitic one, confirming, but with all the reserves of the case, what we said before. In this sense, the little different data of Tell Suleimah can be seen as a 'peripheral' situation.[78]

§ 3.2.4. Table B
From Tell Asmar to Tell Suleimah we encounter a progressive decrease in Akkadian names and similar increase of Sumerian names.

the distance between the Diyāla situation and the specific ones reflects the same situation exposed above, with a substantial homogeneity in the decreasing of the Akkadian component (even if it is still effective and more evident for Tell Suleimah and, in this case, active even for Tell Asmar) and the same substantial increasing of the Sumerian and Reduplicated names;[79]

the parallelism we found, in Table A, between the percentages of Sumerian and Reduplicated onomatologic components, for Tell Asmar and Khafajah, is still evident, but now it is all the same manifest even for Tell Suleimah, although in a different way: here we register a strong parallelism among these two components, when, in Table A, there was a light decreasing in the percentage of the Re-

---

[74] We choose these sites for their better geographical and chronological individuation of the data.

[75] We want to make clear that what we are detecting here, as before, and that we call 'increasing' or 'decreasing' is, in fact, a fixed situation, extrapolated from given documents settled in an established period of time, with absolutely no relations to an 'evolution', in a chronological sense, of the same data. If an evolution exists is only in a geographical perspective, emerged from a confrontation with other, parallel, chronologically speaking, data. Is this geographical evolution, or collocation, that we are trying to detect here.

[76] Taking the first, colored, line as main term of our confrontation.

[77] For Tell Asmar we can suppose even a different distribution of the population, in terms of people merging, due to the more important administrative, economic and political status of this city.

[78] That is, a semitization in progress?

[79] Perhaps we can detect a more sensible quantification of this changes, in terms of numbers.

duplicated names.[80] This increment[81] could be meaningful in the same sense than before, in Table A,[82] where the data were, in our opinion, more pregnant, taking in mind the supposed link between Sumerian and Reduplicated typologies.[83]

What can be added to this data? If we interpret the situation at Khafajah (Table A) as being influenced by an internal discrepancy in the documentation, the increase of Akkadian names at Tell Asmar might be indicative for its major political role.The typological examination could thus be useful, which leads to a strong 'Semitic' share in the population of Tell Asmar. The same could be said about the Table B data, but in this case we must to extend the internal discrepancy interpretation even to Tell Asmar (like the previous case but in totally different terms, the General examination could influence heavily the understanding of the situation). This problem (different approaching/different explanation) is totally outbalanced in the case of Tell Suleimah: in each Table, strong increasing of Sumerian component[84] and strong decreasing of the Akkadian one.

It looks like it was in act, in this region, a kind of still active separation or marginalization of the region, respect to the main Diyāla one, where the ethnic changes there in act, would be, here, still to come. In few words, the Sumerian original stratum of the population is still strong and visible here, where the Semitic one is not yet, completely, emerged. Of course, even if we used words like 'strong' or 'marginalization', we are anyway talking about little indications, fractional numbers, but the situation these marks uncovered, in the frame developed from our lists, seems to have a substantial significance.[85] Only a fi-

nal note: could the not aligned data in Table A, for the Reduplicated names at Tell Suleimah, be referred to the real presence of the Banana language?

§3.2.3. Relationships
The list given in the onomatology database refers to a 'name' and not to a specific individual. We do not know, for example, whether the individual Bibi attested as father of a certain Ennana in IM 31226 is the same quoted as father of a Watarum in A 22038. Patronyms, therefore,

In terms of onomatology, the references to close paternal relationships in our database are many and various, but, of course, it is not always possible to understand the real extension of the same.[86] Of course our list refers only to a 'name' not to a 'person', so, for instance, we don't know if the person quoted as Bibi in IM 31226 as father of Ennana is the same that is quoted as father of Watarum in A 22038; this situation is clearly possible even in the case of two references in the same text (as Belulu, for example, in A 22026), but the only sure parental relationship involving more than two people (father and son) that is possible to highlight from the texts is a cross reference between father, son and brother, relating to Šamaš-bītum, father of two brothers, Ilak-nu''id and Ilum-bānî, from the same text (NBC 10920) and to Rabî-ilum, father of two brothers Kuruba and Tinina, also from a single text (FM 229227). Deeper forms of relationship are sure only for the case of Gaga-aŒûm, son of Ibibi, son of Ù, probably from Tell Asmar. The other references, even if it is always

---

[80] Compared both to the main Diyāla percentage that to the internal site-links. ***

[81] Or mutual stability, bearing in mind that all attestations are taken into consideration.

[82] In front of a stronger increasing of the Sumerian component, at least in Table B.

[83] That is: increasing of Sumerian AND increasing of Reduplicated when we are talking about 'total' occurrences; increasing of Sumerian AND decreasing of Reduplicated when we work with the typologies. The link between these two suppositions is the presumed belonging of the biggest part of the Reduplicated to the Sumerian category.

[84] Seemingly supported by the Reduplicated component.

[85] As mentioned before, the extent of the coincidence between ethnicity and onomatology in this period is uncertain (see Foster 1982, 304). This study aims at evaluating the differences between one region and another, bearing

in mind that people might in fact originated from rather different places. Here, we have only in mind to evaluate the differences between one region and another, in terms of onomatology, but we are at the same time aware of the fact that we know very little about the real origins of the peoples we are talking about and, especially, of what they thought about their own origins. In the case of Tell Suleimah, we don't want to advance the idea of an 'original' Sumerian stratum, in the population of the region, and a 'following', in terms of time, Semitic one. We want only make reference to a Sumerian onomatologic stratum, probably antecedent to a Semitic one, at least because we assist to a progressive changing in the structure of the names. That the coincidence between the name and the person could be a fact in this region in this period and could be taken as a clue in favour of the belonging to any extensive ethnic population (or, ad absurdum, to any race!) it is not yet demonstrated and, in our opinion, is very far from it. What it is sufficiently acceptable, here, is that the very small part of the population of what we have a pale hint in our texts, probably identified itself with a tradition that before was Sumerian and slowly became Semitic.

[86] For the paternal relationship expressed through DUMU we follow here the Gelb's notion; see Gelb 1955: 324.

possible to hypothesize some parental connections when the quotation is found, at least, in the same text and from the same city, are not sure.

§4.1. *The database*

We offer here (see the appendix) a synthetic list of names (with family background and texts). However, this should be considered just a short summary of our database. In the Old Akkadian Onomatology Database,[87] the relevant information is found in the following sub-categories:

Dictionary (of the roots)
Sargonic bibliography
Sargonic onomatology
Sargonic texts

The main mask, Sargonic Onomatology, is structured in this way:

Reference: This field provides a quick reference to the respective publication;

Name: In order to facilitate the search in the database, Akkadian names are lemmatised. This happens when a specific spelling is already attested elsewhere in our documentation. we found here some problems, even for the difficulty to understand exactly to what Akkadian form the Sumerian sign of a specific name was referred, even because we found some different forms for the same name. For instance, the word DINGIR: when it has been possible to find, in our documentation, a corresponding Akkadian form of the name in question (ì-lí-ba-ni/ DINGIR-ba-ni), we adopted it for our list but, when it was not possible (DINGIR-A.ZU), we preferred to leave the translation in a standard form (DINGIR=ilum). This system has been adopted with the aim to rest the more close possible to the original Sumerian word used for the name.[88]

Although this study focuses on completely preserved names, in some cases just partly preserved names are quoted, either when the understood constituent is long enough or it refers to another complete name in the database. We recorded a total of 3201 occurrences of names for 1161 different typologies of names (considering only the complete names): in many cases we modified slightly the reading of the names with the aim to bring closer those names to a standard usually accepted (ad ex. we recorded Antum even when the reading was AN-tim, because we had already attested this reading from other archives); in other cases, we left the original reading (that is, the one we found in the archive of reference, to be attributed to the first Author) without modifying it, whit the aim to leave the more possible unchanged the same original reading. In other words, we tried a normalization only when the operation was not against the original interpretation of the name. A note: this field is referred to any single occurrence of any single name, so it is very frequent that the same given name, with more than one occurrence, occupies a contiguous series of Name fields;

Reading: This field contains the transliterated name as given in the source;
Typology: Here a typology of the text is given.
Father: where a paternal relationship is given, assuming the well attested paternal relationship expressed with DUMU (A DUMU B) as the standard for the period;
Relations: where a general, not essentially familiar, relationship is given, fundamentally the mention of brothers or sisters and the ownership to a clan, expressed with šu/ ši (A šu/ši B);
Professions: where we tried to connect the name to the profession sometimes listed in the text;
Provenance: not referred to the text but to the person(s) listed in the same, when given by the text;
Site: where the text has been found or where it is said to be (site or region);
Text: depending on the possibilities offered by the documentation, we listed here the museum number or the excavation number or the publication (author/year of pub.), with particular reference to our List of text;
Notes: any kind of reference to a given name that has been possible to find in the text;
Update: some specific notes referred to the text or to the archive of publication.

Side by side to this main list, the List of texts (updated up to 2006) contains the subsequent fields: Museum Number; Excavation Number[89]; Origin of the text (when possible); Reference (to the specific publications, where the text is mentioned or studied, referring to the Bibliography); a Key (where a consideration about the text studied is given) and a Notes field.

At the end, a short Utilities section, where we recorded the reading of the Key field in the List of texts, the one of the Origin field in the same list, a short list of biblio-

---

87   In respect to language and structure of the personal names we may refer to Gelb XXX.

88   For the problem of complementarities in the use of ilum/ il£ see Di Vito 1993: 243ff.

89   For these two fields is valid what we said about the repetition of the main data for the field Name.
