

Wasabi Direct Connect

A private direct connection for enhanced performance and reliable security.

When utilizing the cloud, high-bandwidth and secure access is a must. Most organizations moving to and from the cloud are using an internet service provider (ISP) for their public internet connection. While this might be the easiest and least expensive option, accessing the cloud through a public internet connection can be unreliable, unsecure, and have performance issues that are a hindrance. Public internet transfer fees can be near impossible to predict at time of migration coming from an on-prem environment where data access is not charged. Moving large data sets can compete with business critical bandwidth, drastically reducing the performance of the internet connection not only for your transfer to the cloud, but also the day-to-day tasks for the rest of the organization.

Wasabi Direct Connect is a high-speed, private, secure connection from your on-premises data center or colocation site directly to Wasabi. With this solution you can reduce network costs, increase bandwidth, and provide a dependable network experience for your organization.

How do I Learn More About Wasabi Direct Connect?

Wasabi offers a private Direct Connect service comparable to Ethernet Private Line (EPL) as well as a hosted connection option available through our providers, Equinix, Megaport, or Flexential. Wasabi Direct Connect provides a customer with a private connection directly to Wasabi's data center. Not only is it more reliable and effective than using public internet access, Wasabi Direct Connect is the most secure way to access your data. Sending data to Wasabi through a private connection adds another level of assurance that your data is secure in transit and at rest. Some compliance requirements may include the need for a private connection to ensure transit security. This service can be delivered from a customer's data source (private or cloud) in a number of different network architectures along with the choice of additional third-party cloud service providers (CSPs) such as AWS Direct Connect, Azure ExpressRoute, and Google Cloud Interconnect, etc.

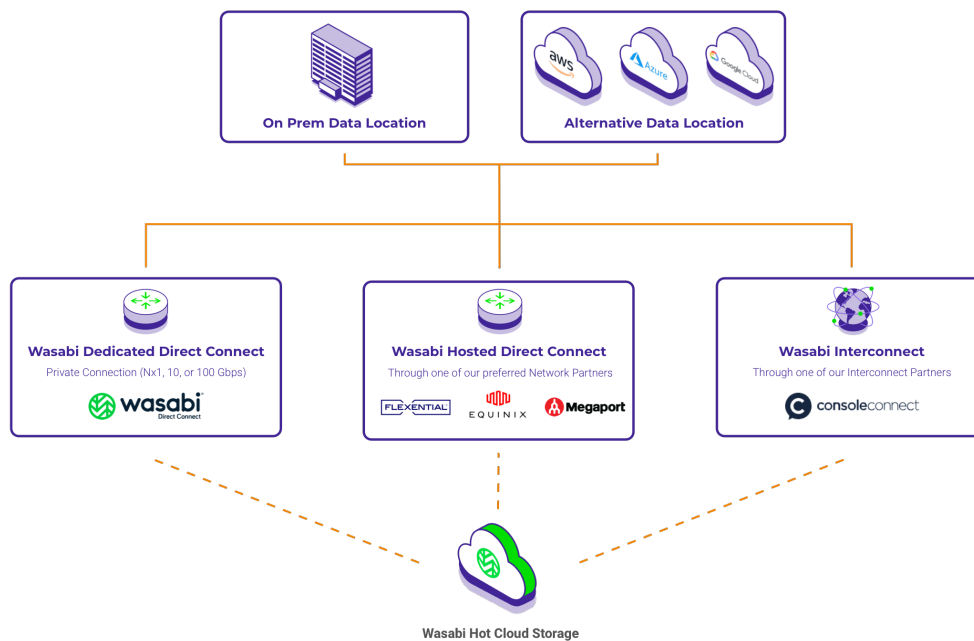

The use of Wasabi Direct Connect to move large files can be extremely helpful for large Media and Entertainment, Healthcare & Life Sciences, Financial and Educational Institutions with unique data hurdles. Wasabi does not charge for any API or egress fees, which alleviates the worry of unknown data transfer fees since Wasabi Direct Connect is priced on a fixed, monthly port fee with a 12-month commitment. Migrating and moving data over to the cloud does not have to remain a financial unknown, and customers can rest easy knowing that on average private connections are half of what the public internet fee would be with most other CSPs.

Features

- › Move large data sets to the cloud more quickly and easily
- › Improve application performance by connecting directly to Wasabi cloud storage
- › Reduce networking costs when transferring data into or out of Wasabi
- › Securely manage your data with a private network connection that bypasses the public internet
- › Multiple high-speed bandwidth options ranging from 1, 10 or 100 Gbps which provide dependable access to your data

Wasabi offers the following options for facilitating a direct connection:

- › **Wasabi Dedicated Direct Connect** – A direct, private connection provisioned from customer's data center to one of the Wasabi data centers. This will include a Letter of Authorization (LOA) given to your provider on behalf of Wasabi.
- › **Wasabi Hosted Direct Connect** – A direct, private connection provisioned from the customer's data center through a cloud service provider (CSP) or a hosted network provider to one of the Wasabi data centers. Wasabi supports direct connect services that allow a customer to connect their cloud providers storage service to one of Wasabi's data centers, given that they are an S3-compatible service.
- › **Wasabi Interconnect** – Leverage interconnected services, from network partners like Console Connect, to facilitate easier, high-speed connections between customer data center locations, whether they're on-premises or in the cloud, and Wasabi Hot Cloud storage.

Note: 1 and 10 Gbps speeds are offered in the Dedicated and Hosted Direct Connect options. Only Dedicated Direct Connect is offered for the 100 Gbps option.
