

Next-Gen QA

How The Right Bug Reporting
Practices Can Save QA Teams
More Than \$125,000 Per Year

Based on time-savings alone, a tool like Marker.io that improves understanding and collaboration can save QA teams **more than \$125,000 per year.**

The Biggest Challenge Your Teams Face During QA Testing

No one gets excited about QA testing, but it's a crucial phase of delivering high quality digital experiences.

Over and over, we see teams suffer from the same issues:

- Reporters are non-technical, leading to bug reports **that fail to include crucial details.**
- Because it's a painful process, **not enough bugs get reported** on staging, and make it to production.
- Traditional tools like PowerPoint or Word documents **frustrate developers,** who prefer proper bug tracking systems.
- The problem only gets worse with **more pages** and **more stakeholders.**

How Bug Reporting Software Eases QA Testing and Saves Companies Money

We've identified 3 core areas where QA teams can save time and money:

- 1. Increasing number of bug reports:** by making it easy to report bugs—in one click.
- 2. Increasing bug report quality:** by giving reporters tools that automatically attach technical details and session replay.
- 3. Reducing bug resolution time:** by ensuring these detailed bug reports are immediately sent to project management tools.

How Reporters Can Report Bugs 10x Faster

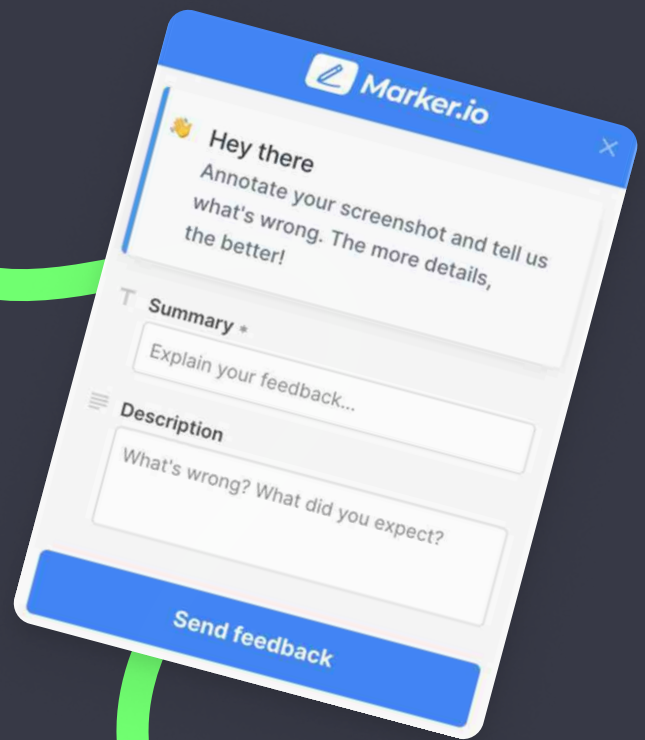

The current process to report bugs looks something like this:

1. Open screenshot tool
2. Select bug area
3. Take a screenshot
4. Annotate it
5. Open PowerPoint/Docs/Excel
6. Add technical information and comments
7. Send to project manager
8. The bug is triaged
9. An issue is created and assigned to a developer in the project management tool.

The key to reporting bugs faster is to **eliminate as many of these steps** as possible.

Removing tedious steps means:

1. It's **easier** to report a bug
2. It's **faster** to report a bug
3. So **more bugs** get reported
4. And **fewer bugs** make it to production.

TIME SAVINGS ON BUG REPORTING

A team of

10 people

Could save up to

**60 minutes
per person per week**

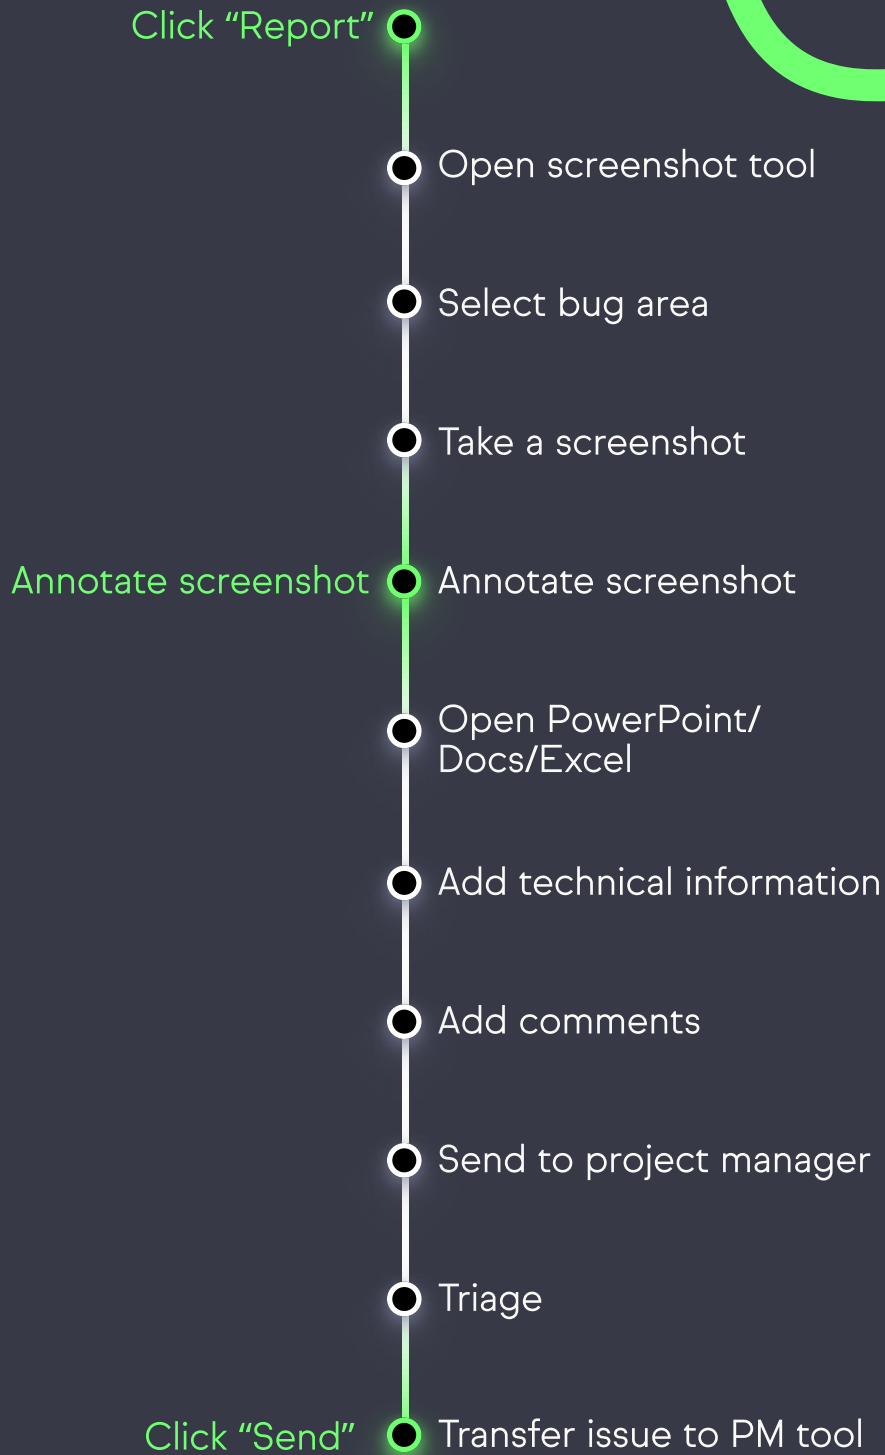

for a cost savings of

\$25,000 per year

$10 \times 1 \text{ hour} \times \text{salary per week} \times 52$
= savings per year

With Marker.io (3 Steps)

Without Marker.io (10 Steps)

Issue created

How Developers Can Resolve Bugs Twice as Fast

To resolve bugs fast, developers need complete information.

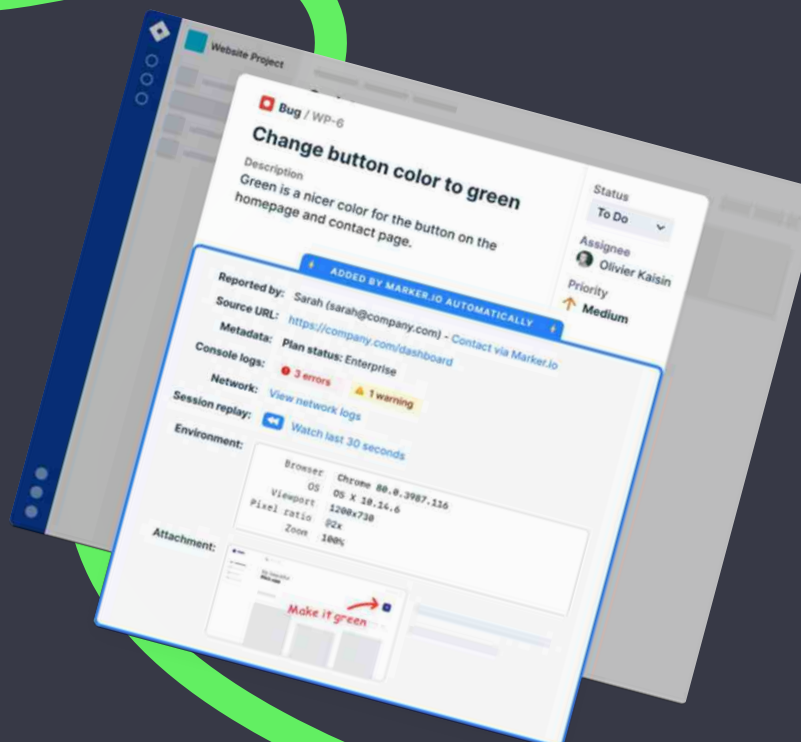

Missing details can add hours in **trying to reproduce an unclear bug** or hours in **back-and-forth for clarification**.

Some of these details are:

1. Title
2. Description
3. Defective URL
4. Console logs
5. Network requests
6. Screenshot or video recording
7. Browser
8. OS
9. Viewport, pixel ratio, zoom level
10. Any site-specific metadata

The best time-saving opportunity for companies is to **drastically reduce back-and-forth**.

This is achieved using software to automatically attach technical details and session replay.

TIME SAVINGS ON BUG RESOLUTION

A team of

10 people

Could save up to

350 minutes per person per week

for a cost savings of

\$100,000 per year

$10 \times \sim 6 \text{ hours} \times \text{salary per week} \times 52$
= savings per year

Hello! Which URL was this on?
Could you provide the console logs as well?

2m52s

Gary Gaspar 1h ago
It was on <https://mystore.com/cart>.
What's console logs?

4m11s

Dave Devsson 1h ago
Please press Cmd + Opt + J.
Tell me if you see any messages there.
