Package 'gsw'

August 19, 2024

Version 1.2-0

Title Gibbs Sea Water Functions

Copyright Original algorithms and 'Matlab'/C library (c) 2015-2023 WG127 SCOR/IAPSO (Scientific Committee on Oceanic Research / International Association for the Physical Sciences of the Oceans, Working Group 127); C wrapper code and R code (c) 2015-2023 Dan Kelley and Clark Richards

Maintainer Dan Kelley <dan.kelley@dal.ca>

Depends R (>= 3.5.0),

Suggests knitr, rmarkdown, testthat

BugReports https://github.com/TEOS-10/GSW-R/issues

Description Provides an interface to the Gibbs 'SeaWater' ('TEOS-10') C library, version 3.06-16-0 (commit '657216dd4f5ea079b5f0e021a4163e2d26893371', dated 2022-10-11, available at <https://github.com/TEOS-10/GSW-C>, which stems from 'Matlab' and other code written by members of Working Group 127 of 'SCOR'/'IAPSO' (Scientific Committee on Oceanic Research / International Association for the Physical Sciences of the Oceans).

`argfix` *Reshape list elements to match that of the first element*

Description

This is mainly used within gsw, to ensure that arguments sent to the C functions are of equal length. This is a convenience, for processing data that often have this condition. For example, a CTD profile is likely to have many values for SP, t, and p, but just a single value for each of longitude and latitude. It is important to call argfix() to handle such cases, because otherwise the underlying C code will be looking past the end of the vectors storing longitude and latitude, which can yield odd results or even segmentation faults.

Usage

```
argfix(list)
```

Arguments

`list`	A list of elements, typically arguments that will be used in GSW functions.

Value

A list with all elements of same shape (length or dimension).

gsw_adiabatic_lapse_rate_from_CT
Adiabatic Lapse Rate

Description

Note that the unit is K/Pa; multiply by 1e4 to get the more useful K/dbar.

Usage

```
gsw_adiabatic_lapse_rate_from_CT(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

adiabatic lapse rate (note unconventional unit) [K/Pa]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

`gsw_adiabatic_lapse_rate_ice` *Adiabatic Lapse Rate of Ice*

Description

Note that the unit is K/Pa; multiply by 1e4 to get the more useful K/dbar.

Usage

```
gsw_adiabatic_lapse_rate_ice(t, p)
```

Arguments

`t`	in-situ temperature (ITS-90) [degC]
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

adiabatic lapse rate (note unconventional unit) [K/Pa]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

gsw_alpha *Thermal expansion coefficient with respect to Conservative Temperature*

Description

Thermal expansion coefficient with respect to Conservative Temperature, using the 75-term equation for specific volume.

Usage

```
gsw_alpha(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

thermal expansion coefficient with respect to Conservative Temperature [1/K]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_alpha_on_beta *Thermal expansion coefficient over haline contraction coefficient*

Description

Thermal expansion coefficient over haline contraction coefficient, using the 75-term equation for specific volume.

Usage

```
gsw_alpha_on_beta(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

ratio of thermal expansion coefficient to haline contraction coefficient [(g/kg)/K]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_alpha_wrt_t_exact *Thermal expansion coefficient with respect to in-situ temperature*

Description

Thermal expansion coefficient with respect to in-situ temperature.

Usage

```
gsw_alpha_wrt_t_exact(SA, t, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

thermal expansion coefficient with respect to in-situ temperature [1/K]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

`gsw_alpha_wrt_t_ice` *Ice Thermal Expansion Coefficient with Respect to in-situ Temperature*

Description

Thermal expansion coefficient of ice, with respect to in-situ temperature.

Usage

```
gsw_alpha_wrt_t_ice(t, p)
```

Arguments

t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

thermal expansion coefficient with respect to in-situ temperature [1/K]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

gsw_beta *Haline contraction coefficient at constant Conservative Temperature*

Description

Haline contraction coefficient with respect to Conservative Temperature, using the 75-term equation for specific volume.

Usage

```
gsw_beta(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Haline contraction coefficient at constant Conservative Temperature [kg/g]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_CT_first_derivatives

First Derivatives of Conservative Temperature

Description

First Derivatives of Conservative Temperature

Usage

```
gsw_CT_first_derivatives(SA, pt)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
pt	potential temperature (ITS-90) [degC]

Value

A list containing `CT_SA` [K/(g/kg)], the derivative of Conservative Temperature with respect to Absolute Salinity, and `CT_pt` [unitless], the derivative of Conservative Temperature with respect to potential temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_CT_first_derivatives_wrt_t_exact

Derivatives of Conservative Temperature with Respect to or at Constant in-situ Temperature

---

Description

Derivatives of Conservative Temperature with Respect to or at Constant in-situ Temperature

Usage

```
gsw_CT_first_derivatives_wrt_t_exact(SA, t, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing CT_SA_wrt_t [K/(g/kg)], the derivative of Conservative Temperature with respect to Absolute Salinity at constant temperature and pressure, CT_t_wrt_t [unitless], the derivative of Conservative Temperature with respect to temperature at constant Absolute Salinity and pressure, and CT_p_wrt_t, the derivative of Conservative Temperature with respect to pressure at constant Absolute Salinity and temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. gsw_CT_freezing *Conservative Temperature of Freezing Seawater*

Description

Conservative Temperature of Freezing Seawater

Usage

```
gsw_CT_freezing(SA, p, saturation_fraction = 1)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
saturation_fraction	saturation fraction of dissolved air in seawater

Value

Conservative Temperature at freezing of seawater [degC].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

`gsw_CT_freezing_first_derivatives` *First Derivatives of Conservative Temperature for Freezing Water*

Description

First Derivatives of Conservative Temperature for Freezing Water

Usage

```
gsw_CT_freezing_first_derivatives(SA, p, saturation_fraction = 1)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`saturation_fraction`	fraction of air in water [unitless]

Value

A list containing `CTfreezing_SA` [K/(g/kg)], the derivative of Conservative Temperature with respect to Absolute Salinity at constant potential temperature, and `CTfreezing_p` [unitless], the derivative of Conservative Temperature with respect to pressure at constant Absolute Salinity.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_CT_from_rho *Conservative Temperature from Density, Absolute Salinity and Pressure*

Description

Conservative Temperature from Density, Absolute Salinity and Pressure

Usage

```
gsw_CT_from_rho(rho, SA, p)
```

Arguments

rho	seawater density [kg/m^3]
SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing two estimates of Conservative Temperature: CT and CT_multiple, each in [degC].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

gsw_CT_from_t *Convert from temperature to conservative temperature*

Description

Convert from temperature to conservative temperature

Usage

```
gsw_CT_from_t(SA, t, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Conservative Temperature [degC]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

`gsw_CT_second_derivatives`

Second Derivatives of Conservative Temperature

Description

Second Derivatives of Conservative Temperature

Usage

```
gsw_CT_second_derivatives(SA, pt)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`pt`	potential temperature (ITS-90) [degC]

Value

A list containing `CT_SA_SA` [K/(g/kg)^2], the second derivative of Conservative Temperature with respect to Absolute Salinity at constant potential temperature, and `CT_SA_pt` [1/(g/kg)], the derivative of Conservative Temperature with respect to potential temperature and Absolute Salinity, and `CT_pt_pt` [1/degC], the second derivative of Conservative Temperature with respect to potential temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_C_from_SP *Electrical Conductivity from Practical Salinity*

Description

Electrical conductivity (in mS/cm) from Practical Salinity. To convert the return value to conductivity ratio, divide by 42.9140 (the value of conductivity at S=35, T68=15, and p=0).

Usage

```
gsw_C_from_SP(SP, t, p)
```

Arguments

SP	Practical Salinity (PSS-78) [unitless]. The valid range for most 'gsw' functions is from 2 to 42.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

electrical conductivity [mS/cm]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_deltaSA_from_SP *Absolute Salinity Anomaly from Practical Salinity*

Description

Absolute Salinity Anomaly from Practical Salinity

Usage

```
gsw_deltaSA_from_SP(SP, p, longitude, latitude)
```

Arguments

SP	Practical Salinity (PSS-78) [unitless]. The valid range for most 'gsw' functions is from 2 to 42.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Value

deltaSA Absolute Salinity Anomaly [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

gsw_enthalpy *Specific enthalpy of seawater (75-term equation)*

Description

Specific enthalpy of seawater (75-term equation)

Usage

```
gsw_enthalpy(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

specific enthalpy [J/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_enthalpy_first_derivatives

First Derivatives of Enthalpy

Description

First Derivatives of Enthalpy

Usage

```
gsw_enthalpy_first_derivatives(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

a list containing h_SA [(J/kg)/(g/kg)], the derivative of enthalpy wrt Absolute Salinity, and h_CT [(J/kg)/degC], the derivative of enthalpy wrt Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

Bugs

The HTML documentation suggests that this function returns 3 values, but there are only 2 returned values in the C code used here (and the matlab code on which that is based). Also, the d/dSA check values given the HTML are not reproduced by the present function. This was reported on Mar 18, 2017 as https://github.com/TEOS-10/GSW-Matlab/issues/7. See https://github.com/TEOS-10/GSW-R/issues/34

gsw_enthalpy_second_derivatives

Second Derivatives of Enthalpy

Description

Second Derivatives of Enthalpy

Usage

```
gsw_enthalpy_second_derivatives(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing h_SA_SA [(J/kg)/(g/kg)^2], the second derivative of enthalpy with respect to Absolute Salinity, h_SA_CT [(J/kg)/(K*g/kg)], the derivative of enthalpy with respect to Absolute Salinity and Conservative Temperature, and h_CT_CT [(J/kg)/degC^2], the second derivative of enthalpy with respect to Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_enthalpy_second_derivatives_CT_exact
Second Derivatives of Enthalpy (exact)

Description

Second Derivatives of Enthalpy (exact)

Usage

```
gsw_enthalpy_second_derivatives_CT_exact(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing h_SA_SA [(J/kg)/(g/kg)^2], the second derivative of enthalpy with respect to Absolute Salinity, h_SA_CT [(J/kg)/(K*g/kg)], the derivative of enthalpy with respect to Absolute Salinity and Conservative Temperature, and h_CT_CT [(J/kg)/degC^2], the second derivative of enthalpy with respect to Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. `gsw_enthalpy_t_exact` *Seawater Specific Enthalpy in terms of in-situ Temperature*

Description

Seawater Specific Enthalpy in terms of in-situ Temperature

Usage

```
gsw_enthalpy_t_exact(SA, t, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

specific enthalpy [J/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_entropy_first_derivatives

First Derivatives of Entropy

Description

First Derivatives of Entropy

Usage

```
gsw_entropy_first_derivatives(SA, CT)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].

Value

a list containing eta_SA [(J/(kg*degC) / (g/kg)], the derivative of entropy wrt Absolute Salinity, and eta_CT [(J/(kg*degC^2)], the derivative of entropy wrt Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_entropy_from_pt *Specific Entropy ito Absolute Salinity and Potential Temperature*

Description

Calculates specific entropy in terms of Absolute Salinity and Potential Temperature.

Usage

```
gsw_entropy_from_pt(SA, pt)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
pt	potential temperature (ITS-90) [degC]

Value

specific entropy [J/(kg*degC)]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_Fdelta *Ratio of Absolute to Preformed Salinity, minus 1*

Description

Ratio of Absolute to Preformed Salinity, minus 1

Usage

```
gsw_Fdelta(p, longitude, latitude)
```

Arguments

p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Value

(S/Sstar)-1 [unitless]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip

on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_frazil_properties *Properties of Frazil ice*

Description

Calculation of Absolute Salinity, Conservative Temperature, and ice mass fraction based on bulk Absolute Salinity, bulk enthalpy, and pressure

Usage

```
gsw_frazil_properties(SA_bulk, h_bulk, p)
```

Arguments

SA_bulk	Absolute Salinity of a combination of seawater and ice [g/kg]
h_bulk	enthalpy of a mixture of seawater and ice [J/kg]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

a list containing SA_final, h_final and w_Ih_final.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

`gsw_frazil_ratios_adiabatic` *Ratios of SA, CT and p changes when Frazil Ice Forms*

Description

Ratios of changes in `SA`, `CT` and `p` that occur when frazil ice forms due to changes in pressure upon the mixture of seawater and ice.

Usage

```
gsw_frazil_ratios_adiabatic(SA, p, w_Ih)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`w_Ih`	initial mass fraction (ice) / (water + ice)

Value

a list containing `dSA_dCT_frazil`, `dSA_dP_frazil` and `dCT_dP_frazil`.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_geo_strf_dyn_height

Geostrophic Dynamic Height Anomaly

Description

This calculates a geopotential anomaly, called either the dynamic height anomaly or the geostrophic streamfunction in the TEOS-10 document listed as [1] below; users should read that and the references therein for more details on the definition and its calculation here.

To get the column-integrated value in meters, take the first value of the returned vector and divide by $9.7963 m/s^2$. Note that this yields an integral with the top measured pressure (not zero) as an upper limit.

Usage

```
gsw_geo_strf_dyn_height(SA, CT, p, p_ref = 0)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
p_ref	reference pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Details

Because of the scheme used in the underlying C code, the pressures must be in order, and must not have any repeats. Also, there must be at least 4 pressure values. Violating any of these three restrictions yields an error.

If p_ref exceeds the largest p value, a vector of zeros is returned, in accordance with the underlying C code.

Note the alteration of the test-value tolerance from a much smaller default. This is required because the test values derive from the GSW-Matlab code, which uses a different interpolation scheme than the GSW-C code, upon which GSW-R relies. See References 2 and 3 for more on this topic.

Value

A vector containing geopotential anomaly in m^2/s^2 for each level. For more on the units, see [2].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

Examples

```
SA <- c(34.7118, 34.8915, 35.0256, 34.8472, 34.7366, 34.7324)
CT <- c(28.8099, 28.4392, 22.7862, 10.2262,  6.8272,  4.3236)
p <- c(      10,      50,     125,     250,     600,    1000)
```

```
p_ref <- 500
dh <- gsw_geo_strf_dyn_height(SA, CT, p, p_ref)
# NOTE: see Details for the reason for the coarse tolerance.
stopifnot(all.equal(dh,
    c(12.172172845782585, 9.797739925848624, 6.070940749148281,
      3.042891445395256, -1.078872239804912, -4.656953829254061),
    tolerance=0.02))
```

---

gsw_geo_strf_dyn_height_1

Geostrophic Dynamic Height Anomaly (provisional version)

Description

This calculates a geopotential anomaly, called either the dynamic height anomaly or the geostrophic streamfunction in the TEOS-10 document listed as [1] below.

To get the column-integrated value in meters, take the first value of the returned vector and divide by $9.7963 m/s^2$. Note that this yields an integral with the top measured pressure (not zero) as an upper limit.

Usage

```
gsw_geo_strf_dyn_height_1(SA, CT, p, p_ref = 0, max_dp = 1, interp_method = 2)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
p_ref	reference pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
max_dp	numeric value indicating the maximum tolerated pressure separation between levels. If any pressure step exceeds max_dp, then a uniform grid is constructed with max_dp as the interval.
interp_method	integer specifying interpolation scheme (1 for linear, 2 for pchip)

Details

Because of the scheme used in the underlying C code, the pressures must be in order, and must not have any repeats. Also, there must be at least 4 pressure values. Violating any of these restrictions yields an error.

If p_ref exceeds the largest p value, a vector of zeros is returned, in accordance with the underlying C code.

Value

A vector containing geopotential anomaly in m^2/s^2 for each level. For more on the units, see [2].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. gsw_geo_strf_dyn_height_pc

Geostrophic Dynamic Height Anomaly (Piecewise-Constant Profile)

Description

Geostrophic Dynamic Height Anomaly (Piecewise-Constant Profile)

Usage

```
gsw_geo_strf_dyn_height_pc(SA, CT, delta_p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
delta_p	difference in sea pressure between the deep and shallow limits of layers within which SA and CT are assumed to be constant. Note that delta_p must be positive.

Value

A list containing dyn_height, the dynamic height anomaly [m^2/s^2], and p_mid [dbar], the pressures at the layer centres. Note that the dynamic height anomaly unit, also known as a "dynamic meter", corresponds to approximately 1.02 metres of sealevel height (see e.g. Talley et al., 2011. Descriptive Physical Oceanography, Edition 6. Elsevier).

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. ```

gsw_gibbs *Gibbs Energy of Seawater, and its Derivatives*

Description

Gibbs Energy of Seawater, and its Derivatives

Usage

```
gsw_gibbs(ns, nt, np, SA, t, p = 0)
```

Arguments

ns	An integer, the order of the SA derivative. Must be 0, 1, or 2.
nt	An integer, the order of the t derivative. Must be 0, 1, or 2.
np	An integer, the order of the p derivative. Must be 0, 1, or 2.
SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Gibbs energy [J/kg] if ns=nt=np=0. Derivative of energy with respect to SA [J/kg/(g/kg)^ns] if ns is nonzero and nt=np=0, etc. Note that derivatives with respect to pressure are in units with Pa, not dbar.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. gsw_gibbs_ice *Gibbs Energy of Ice, and its Derivatives*

Description

Gibbs Energy of Ice, and its Derivatives

Usage

```
gsw_gibbs_ice(nt, np, t, p = 0)
```

Arguments

nt	An integer, the order of the t derivative. Must be 0, 1, or 2.
np	An integer, the order of the p derivative. Must be 0, 1, or 2.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Gibbs energy [J/kg] if ns=nt=np=0. Derivative of energy with respect to t [J/kg/(degC)^nt] if nt is nonzero, etc. Note that derivatives with respect to pressure are in units with Pa, not dbar.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

---

gsw_grav *Gravitational Acceleration*

Description

Gravitational Acceleration

Usage

```
gsw_grav(latitude, p = 0)
```

Arguments

latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

gravitational acceleration [m/s^2]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_Helmholtz_energy_ice

Helmholtz Energy of Ice

Description

Helmholtz Energy of Ice

Usage

```
gsw_Helmholtz_energy_ice(t, p)
```

Arguments

t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Helmholtz energy if ice [J/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_ice_fraction_to_freeze_seawater

Ice Fraction to Cool Seawater to Freezing

Description

Ice Fraction to Cool Seawater to Freezing

Usage

```
gsw_ice_fraction_to_freeze_seawater(SA, CT, p, t_Ih)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
t_Ih	initial temperature of ice [degC]

Value

a list containing SA_freeze, CT_freeze and w_Ih.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

gsw_infunnel *Determine whether a point is inside the 'funnel' of acceptable values*

Description

This function determines whether a given hydrographic value lies what the TEOS-10 literature calls a "funnel" of values that lead to acceptably accurate computation of specific volume. For more details, consult the TEOS-10 literature, perhaps starting with the materials referred to in the webpage cited in the 'References' section.

Usage

```
gsw_infunnel(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

a logical value indicating whether the given point is inside the funnel of acceptable values.

Examples

```
library(gsw)
gsw_infunnel(35, 10, 100) # TRUE
gsw_infunnel(45, 10, 100) # FALSE: too salty
gsw_infunnel(35, -4, 100) # FALSE: below freezing
```

`gsw_internal_energy` *Specific Internal Energy of Seawater (75-term equation)*

Description

Specific Internal Energy of Seawater (75-term equation)

Usage

```
gsw_internal_energy(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

specific internal energy [J/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

`gsw_IPV_vs_fNsquared_ratio` *Ratio of vert. gradient of pot. density to vert grad of locally-referenced pot density*

Description

Note that the C library had to be patched to get this working; a new version of the library will address the bug directly.

Usage

```
gsw_IPV_vs_fNsquared_ratio(SA, CT, p, p_ref = 0)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`p_ref`	reference pressure [dbar]

Value

list containing IPV_vs_fNsquared_ratio [unitless] and mid-point pressure p_mid [dbar]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_kappa *Isentropic Compressibility of Seawater (75-term equation)*

Description

Isentropic Compressibility of Seawater (75-term equation)

Usage

```
gsw_kappa(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

isentropic compressibility [1/Pa] (not 1/dbar)

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

latent heat of freezing [J/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

`gsw_melting_ice_equilibrium_SA_CT_ratio`
Calculate d(SA)/d(CT) for Ice Melting in near-freezing Seawater

---

Description

Calculate d(SA)/d(CT) for Ice Melting in near-freezing Seawater

Usage

```
gsw_melting_ice_equilibrium_SA_CT_ratio(SA, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

ratio of change in SA to change in CT [g/kg/degC].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. gsw_melting_ice_into_seawater

Calculate properties related to ice melting in seawater

Description

Calculate properties related to ice melting in seawater

Usage

```
gsw_melting_ice_into_seawater(SA, CT, p, w_Ih, t_Ih)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
w_Ih	initial mass fraction (ice) / (water + ice)
t_Ih	initial temperature of ice [degC]

Value

a list containing SA_final, CT_final and w_Ih_final.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

`gsw_Nsquared` *Calculate Brunt Vaisala Frequency squared*

Description

The result is computed based on first-differencing a computed density with respect pressure, and this can yield noisy results with CTD data that have not been smoothed and decimated. It also yields infinite values, for repeated adjacent pressure (e.g. this occurs twice with the `ctd` dataset provided in the **oce** package).

Usage

```
gsw_Nsquared(SA, CT, p, latitude = 0)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Value

list containing N2 [1/s^2] and mid-point pressure p_mid [dbar]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. gsw_O2sol *Oxygen Solubility in Seawater (GSW variables)*

Description

Computes oxygen concentration for seawater that is equilibrium with vapour-saturated air at standard atmospheric pressure (101.325 kPa, i.e. for sea pressure of 0dbar). The formula, not created by the SCOR/IAPSO Working Group 127 nor approved by the IOC, is stated in the TEOS-10 documentation to be from Benson and Krause (1984), as fitted by Garcia and Gordon (1992, 1993). That formulation is framed in UNESCO-era water properties, so longitude and latitude are needed here, to convert to these quantities from Absolute Salinity and Conservative Temperature; see also gsw_O2sol_SP_pt, which is formulated in UNESCO terms.

Usage

```
gsw_O2sol(SA, CT, p, longitude, latitude)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Value

Oxygen solubility in micro-moles per kg.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

---

gsw_O2sol_SP_pt *Oxygen Solubility in Seawater (UNESCO variables)*

Description

Computes oxygen concentration for seawater that is equilibrium with vapour-saturated air at standard atmospheric pressure (101.325 kPa, i.e. for sea pressure of 0dbar). The formula, not created by the SCOR/IAPSO Working Group 127 nor approved by the IOC, is stated in the TEOS-10 documentation to be from Benson and Krause (1984), as fitted by Garcia and Gordon (1992, 1993). That formulation is framed in UNESCO-era water properties; see gsw_O2sol for the corresponding computation in GSW variables.

Usage

```
gsw_O2sol_SP_pt(SP, pt)
```

Arguments

SP	Practical Salinity (PSS-78) [unitless]. The valid range for most 'gsw' functions is from 2 to 42.
pt	potential temperature (ITS-90) [degC]

Value

Oxygen solubility in micro-moles per kg.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_pot_enthalpy_ice_freezing

Potential Enthalpy of Ice at Freezing Point

Description

Potential Enthalpy of Ice at Freezing Point

Usage

```
gsw_pot_enthalpy_ice_freezing(SA, p, saturation_fraction = 1)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
saturation_fraction	fraction of air in water [unitless]

Value

potential enthalpy [J/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

Bugs

1. The C source underlying this function lacks an argument, saturation_fraction, which is present in the Matlab source, and so that argument is ignored here.

2. The R code does not reproduce the check values stated at http://www.teos-10.org/pubs/gsw/html/gsw_pot_enthalpy_ice_freezing.html. Those values are incorporated in the test provided in 'Examples', so that test is not performed during build tests. See https://github.com/TEOS-10/GSW-R/issues/27.

`gsw_pot_enthalpy_ice_freezing_first_derivatives`
First Derivatives of Potential Enthalpy

Description

First Derivatives of Potential Enthalpy

Usage

```
gsw_pot_enthalpy_ice_freezing_first_derivatives(SA, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing `pot_enthalpy_ice_freezing_SA` [(J/kg)/(g/kg)], the derivative of potential enthalpy with respect to Absolute Salinity, and `pot_enthalpy_ice_freezing_p` [unitless], the derivative of Conservative Temperature with respect to potential temperature. (Note that the second quantity is denoted `pot_enthalpy_ice_freezing_P` in the documentation for the Matlab function.)

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

---

gsw_pot_rho_t_exact *Potential density*

Description

Potential density

Usage

```
gsw_pot_rho_t_exact(SA, t, p, p_ref)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
p_ref	reference pressure [dbar]

Value

potential density [kg/m^3]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

gsw_pressure_freezing_CT
Pressure at which Seawater Freezes

Description

Pressure at which Seawater Freezes

Usage

```
gsw_pressure_freezing_CT(SA, CT, saturation_fraction = 1)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
saturation_fraction	fraction of air in water [unitless]

Value

pressure at which freezing will occur [dbar]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

`gsw_pt_first_derivatives`

First Derivatives of Potential Temperature

Description

First Derivatives of Potential Temperature

Usage

```
gsw_pt_first_derivatives(SA, CT)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].

Value

A list containing `pt_SA` [K/(g/kg)], the derivative of potential temperature with respect to Absolute Salinity, and `pt_CT` [unitless], the derivative of potential temperature with respect to Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_pt_from_pot_enthalpy_ice_poly(pot_enthalpy_ice)
```

Arguments

pot_enthalpy_ice	potential enthalpy of ice [J/kg]

Value

potential temperature [degC]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_pt_from_t *Potential Temperature from in-situ Temperature*

Description

Potential Temperature from in-situ Temperature

Usage

```
gsw_pt_from_t(SA, t, p, p_ref = 0)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
p_ref	reference pressure [dbar]

Value

potential temperature [degC]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

`gsw_pt_second_derivatives` *Second Derivatives of Potential Temperature*

Description

Second Derivatives of Potential Temperature

Usage

```
gsw_pt_second_derivatives(SA, CT)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].

Value

A list containing `pt_SA_SA` [K/(g/kg)^2], the second derivative of potential temperature with respect to Absolute Salinity at constant potential temperature, and `pt_SA_pt` [1/(g/kg)], the derivative of potential temperature with respect to Conservative Temperature and Absolute Salinity, and `pt_pt_pt` [1/degC], the second derivative of potential temperature with respect to Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_p_from_z *Pressure from height (75-term equation)*

Description

Pressure from height (75-term equation)

Usage

```
gsw_p_from_z(z, latitude, geo_strf_dyn_height, sea_surface_geopotential)
```

Arguments

z	height, zero at surface (but note last 2 args) and positive upwards [m]
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)
geo_strf_dyn_height	vector of same length as z and latitude, indicating dynamic height [m^2/s^2]. If not supplied, this defaults to a vector of 0 values, with length matching that of z.
sea_surface_geopotential	vector of same length as z and latitude, indicating geopotential at zero sea pressure [m^2/s^2]. If not supplied, this defaults to a vector of 0 values, with length matching that of z.

Value

sea pressure [dbar]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. ```

---

gsw_rho *In-situ density*

Description

In-situ density, using the 75-term equation for specific volume.

Usage

```
gsw_rho(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

in-situ density [kg/m^3]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

`gsw_rho_alpha_beta` *In-situ density, thermal expansion coefficient and haline contraction coefficient (75-term equation)*

Description

Calculate the in-situ density, the expansion coefficient (with respect to Conservative Temperature) and the haline contraction coefficient (with respect to Absolute Salinity), using the 75-term equation.

Usage

```
gsw_rho_alpha_beta(SA, CT, p)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing in-situ density `rho` [kg/m^3], thermal expansion coefficient `alpha` [1/degC], and haline contraction coefficient `beta` [kg/g].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_rho_first_derivatives

Density First Derivatives wrt SA, CT and p (75-term equation)

Description

Density First Derivatives wrt SA, CT and p (75-term equation)

Usage

```
gsw_rho_first_derivatives(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

list containing drho_dSA [kg^2/(g m^3)], drho_dCT [kg/(K m^3)] and drho_dp [kg/(Pa m^3)]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_rho_first_derivatives_wrt_enthalpy

Density First Derivatives wrt enthalpy (75-term equation)

Description

Density First Derivatives wrt enthalpy (75-term equation)

Usage

```
gsw_rho_first_derivatives_wrt_enthalpy(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing rho_SA_wrt_h [(kg/m^3)/(g/kg)] and rho_h [(kg/m^3)/(J/kg)].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

`gsw_rho_second_derivatives`
Second Derivatives of Density

Description

Second Derivatives of Density

Usage

```
gsw_rho_second_derivatives(SA, CT, p)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing `rho_SA_SA` [(kg/m^3)/(g/kg)^2], the second derivative of density with respect to Absolute Salinity, `rho_SA_CT` [(g/kg)/(g/kg)/degC], the derivative of density with respect to Absolute Salinity and Conservative Temperature, and `rho_CT_CT` [(kg/m^3)/degC^2], the second derivative of density with respect to Conservative Temperature.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

`gsw_rho_second_derivatives_wrt_enthalpy`
Second Derivatives of Density wrt Enthalpy

Description

Second Derivatives of Density wrt Enthalpy

Usage

```
gsw_rho_second_derivatives_wrt_enthalpy(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing rho_SA_SA [(kg/m^3)/(g/kg)^2], the second derivative of density with respect to Absolute Salinity, rho_SA_h [(g/kg)/(g/kg)/(J/kg)], the derivative of density with respect to Absolute Salinity and enthalpy, and rho_h_h [(kg/m^3)/(J/kg)^2], the second derivative of density with respect to enthalpy.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_SAAR *Absolute Salinity Anomaly Ratio*

Description

Absolute Salinity Anomaly Ratio

Usage

```
gsw_SAAR(p, longitude, latitude)
```

Arguments

p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Value

a list containing SAAR, which is the (unitless) Absolute Salinity Anomaly Ratio, and in_ocean is set to 1 if SAAR is nonzero, or to 0 otherwise.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

Bugs

The definition of in_ocean is incorrect, because the C function named gsw_saar, which is called by the present R function, does not calculate in_ocean, as the base Matlab function named gsw_SAAR does. However, examination of the Matlab code shows that in_ocean is set to 0 along with SAAR, whenever the original estimate of the latter is nonfinite. Thus, points that would be signalled as being on the land by the Matlab code are indicated in the same way with the present R function. However, other points may also be indicated as being on land, if SAAR is simply zero in the first calculation. Whether this poses a problem in practice is an open question, since it seems likely that this function would only be called with oceanic locations, anyway. If problems arise for users, a patch can be written to improve things.

gsw_SA_freezing_from_CT

Compute Absolute Salinity at Freezing Conservative Temperature

---

Description

Compute Absolute Salinity at Freezing Conservative Temperature

Usage

```
gsw_SA_freezing_from_CT(CT, p, saturation_fraction = 1)
```

Arguments

CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
saturation_fraction	fraction of air in water [unitless]

Value

Absolute Salinity [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_SA_freezing_from_CT_poly

Compute Absolute Salinity at Freezing Point (Polynomial version)

Description

Compute Absolute Salinity at Freezing Point (Polynomial version)

Usage

```
gsw_SA_freezing_from_CT_poly(CT, p, saturation_fraction = 1)
```

Arguments

`CT`	Conservative Temperature [degC].
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`saturation_fraction`	fraction of air in water [unitless]

Value

Absolute Salinity [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. gsw_SA_freezing_from_t

Compute Absolute Salinity at Freezing in-situ Temperature

Description

Compute Absolute Salinity at Freezing in-situ Temperature

Usage

```
gsw_SA_freezing_from_t(t, p, saturation_fraction = 1)
```

Arguments

`t`	in-situ temperature (ITS-90) [degC]
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`saturation_fraction`	fraction of air in water [unitless]

Value

Absolute Salinity [g/kg]

Implementation Note

gsw_SA_from_rho *Compute Absolute Salinity from Density, etc*

Description

Compute Absolute Salinity from Density, etc

Usage

```
gsw_SA_from_rho(rho, CT, p)
```

Arguments

rho	seawater density [kg/m^3]
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Absolute Salinity [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_SA_from_SP *Convert from Practical Salinity to Absolute Salinity*

Description

Calculate Absolute Salinity from Practical Salinity, pressure, longitude, and latitude.

Usage

```
gsw_SA_from_SP(SP, p, longitude, latitude)
```

Arguments

SP	Practical Salinity (PSS-78) [unitless]. The valid range for most 'gsw' functions is from 2 to 42.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Details

If SP is a matrix and if its dimensions correspond to the lengths of longitude and latitude, then the latter are converted to analogous matrices with expand.grid.

Value

Absolute Salinity [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_SA_from_Sstar *Absolute Salinity from Preformed Salinity*

Description

Calculate Absolute Salinity from Preformed Salinity, pressure, longitude, and latitude.

Usage

```
gsw_SA_from_Sstar(Sstar, p, longitude, latitude)
```

Arguments

Sstar	Preformed Salinity [g/kg]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Details

If Sstar is a matrix and if its dimensions correspond to the lengths of longitude and latitude, then the latter are converted to analogous matrices with expand.grid.

Value

Absolute Salinity [g/kg]

gsw_seaice_fraction_to_freeze_seawater

Sea ice Fraction to Cool Seawater to Freezing

Description

Sea ice Fraction to Cool Seawater to Freezing

Usage

```
gsw_seaice_fraction_to_freeze_seawater(SA, CT, p, SA_seaice, t_seaice)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
SA_seaice	Absolute Salinity of sea ice [g/kg]
t_seaice	initial temperature of sea ice [degC]

Value

a list containing SA_freeze, CT_freeze and w_Ih.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

gsw_sigma0 *Potential density anomaly referenced to 0 dbar*

Description

This uses the 75-term density equation, and returns potential density referenced to a pressure of 0 dbar, minus 1000 kg/m^3.

Usage

```
gsw_sigma0(SA, CT)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].

Value

potential density anomaly [kg/m^3]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

`gsw_sigma1` *Potential density anomaly referenced to 1000 dbar*

Description

This uses the 75-term density equation, and returns potential density referenced to a pressure of 1000 dbar, minus 1000 kg/m^3.

Usage

```
gsw_sigma1(SA, CT)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].

Value

potential density anomaly [kg/m^3]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_specvol *Specific Volume of Seawater*

Description

Specific Volume of Seawater

Usage

```
gsw_specvol(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Specific volume (1/density)

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_specvol_alpha_beta

Specific Volume, alpha, and beta

Description

Specific Volume, alpha, and beta

Usage

```
gsw_specvol_alpha_beta(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

a list holding specvol, the specific volume [m^3/kg], alpha, the thermal expansion coefficient [1/degC], and beta, the haline contraction coefficient [kg/g].

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

`gsw_specvol_anom_standard`

Specific volume anomaly [standard] (75-term equation)

Description

Note that the TEOS function named `specific_volume_anomaly` is not provided in the C library, so it is not provided in R, either.

Usage

```
gsw_specvol_anom_standard(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Specific volume anomaly [m^3/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_specvol_first_derivatives
First Derivatives of Specific Volume

Description

First Derivatives of Specific Volume

Usage

```
gsw_specvol_first_derivatives(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing v_SA [(m^3/kg)/(g/kg)], the derivative of specific volume with respect to Absolute Salinity, v_CT [(m^3/kg)/degC], the derivative of specific volume with respect to Conservative Temperature, and v_p [(m^3/kg)/dbar], the derivative of specific volume with respect to pressure. (Note that the last quantity is denoted v_P in the documentation for the Matlab function.)

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_specvol_second_derivatives
Second Derivatives of Specific Volume

Description

Second Derivatives of Specific Volume

Usage

```
gsw_specvol_second_derivatives(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing specvol_SA_SA [(m^3/kg)/(g/kg)^2], the second derivative of specific volume with respect to Absolute Salinity, specvol_SA_CT [(m^3/kg)/(g/kg)/degC], the derivative of specific volume with respect to Absolute Salinity and Conservative Temperature, specvol_CT_CT [(m^3/kg)/degC^2], the second derivative of specific volume with respect to Conservative Temperature, specvol_SA_p [(m^3/kg)/(g/kg)/Pa], the derivative of specific volume with respect to Absolute Salinity and pressure, and specvol_CT_p [(m^3/kg)/K/dbar], the derivative of specific volume with respect to Conservative Temperature and pressure.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

gsw_specvol_second_derivatives_wrt_enthalpy

Second Derivatives of Specific Volume wrt Enthalpy

Description

Second Derivatives of Specific Volume wrt Enthalpy

Usage

```
gsw_specvol_second_derivatives_wrt_enthalpy(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most ‘gsw‘ functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

A list containing specvol_SA_SA [(m^3/kg)/(g/kg)^2], the second derivative of specific volume with respect to Absolute Salinity, specvol_SA_h [(m^3/kg)/(g/kg)/(J/kg)], the derivative of specific volume with respect to Absolute Salinity and enthalpy, and specvol_h_h [(m^3/kg)/(J/kg)^2], the second derivative of specific volume with respect to enthalpy.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

```

gsw_specvol_t_exact *Specific Volume of Seawater*

Description

Specific Volume of Seawater

Usage

```
gsw_specvol_t_exact(SA, t, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

Specific volume [m^3/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_spiciness0 *Seawater Spiciness at p=0 dbar*

Description

Calculate seawater spiciness referenced to 0 dbar (i.e. the surface).

Usage

```
gsw_spiciness0(SA, CT)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].

Value

spiciness [kg/m^3]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

---

gsw_SP_from_SA *Convert from Absolute Salinity to Practical Salinity*

Description

Calculate Practical Salinity from Absolute Salinity, pressure, longitude, and latitude.

Usage

```
gsw_SP_from_SA(SA, p, longitude, latitude)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Details

If SP is a matrix and if its dimensions correspond to the lengths of longitude and latitude, then the latter are converted to analogous matrices with expand.grid.

Note: unlike the corresponding Matlab function, this does not return a flag indicating whether the location is in the ocean.

Value

Practical Salinity (PSS-78) [unitless]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_SP_from_SK *Calculate Practical Salinity from Knudsen Salinity*

Description

Calculate Practical Salinity from Knudsen Salinity

Usage

```
gsw_SP_from_SK(SK)
```

Arguments

SK	Knudsen Salinity [parts per thousand, ppt]

Value

Practical Salinity (PSS-78) [unitless]

References

http://www.teos-10.org/pubs/gsw/html/gsw_SP_from_SK.html

See Also

```

---

gsw_SP_from_SR *Calculate Practical Salinity from Reference Salinity*

Description

Calculate Practical Salinity from Reference Salinity

Usage

```
gsw_SP_from_SR(SR)
```

Arguments

SR	Reference Salinity [g/kg]

Value

Practical Salinity (PSS-78) [unitless]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

---

gsw_SP_from_Sstar *Practical Salinity from Preformed Salinity*

Description

Practical Salinity from Preformed Salinity

Usage

```
gsw_SP_from_Sstar(Sstar, p, longitude, latitude)
```

Arguments

`Sstar`	Preformed Salinity [g/kg]
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`longitude`	longitude in decimal degrees, positive to the east of Greenwich. (This is called `long` in the TEOS-10 Matlab code.)
`latitude`	latitude in decimal degrees, positive to the north of the equator. (This is called `lat` in the TEOS-10 Matlab code.)

Value

Practical Salinity (PSS-78) [unitless]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the `library/gsw_data_v3_0.mat` file provided in the GSW-Matlab source code, version 3.06-11. ```

---

gsw_SP_salinometer *Practical Salinity from Salinometer Reading*

Description

Calculate Practical Salinity from salinometer readings of conductivity ratio and bath temperature.

Usage

```
gsw_SP_salinometer(ratio, temperature)
```

Arguments

ratio	Conductivity ratio [unitless]. (This is called Rt in the GSW documentation.)
temperature	Bath temperature [degC]. (This is called t in the GSW documentation.)

Value

Practical salinity on the PSS-77 scale [unitless]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. ```

---

gsw_SR_from_SP *Calculate Reference Salinity from Practical Salinity*

Description

Calculate Reference Salinity from Practical Salinity

Usage

```
gsw_SR_from_SP(SP)
```

Arguments

SP	Practical Salinity (PSS-78) [unitless]. The valid range for most 'gsw' functions is from 2 to 42.

Value

Reference Salinity [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_Sstar_from_SA *Convert from Absolute Salinity to Preformed Salinity*

Description

Calculate Preformed Salinity from Absolute Salinity, pressure, longitude, and latitude.

Usage

```
gsw_Sstar_from_SA(SA, p, longitude, latitude)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
longitude	longitude in decimal degrees, positive to the east of Greenwich. (This is called long in the TEOS-10 Matlab code.)
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called lat in the TEOS-10 Matlab code.)

Details

If SA is a matrix and if its dimensions correspond to the lengths of longitude and latitude, then the latter are converted to analogous matrices with expand.grid.

Value

Preformed Salinity [g/kg]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_thermobaric *Thermobaric coefficient (75-term equation)*

Description

Thermobaric coefficient (75-term equation)

Usage

```
gsw_thermobaric(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

thermobaric coefficient wrt Conservative Temperature [1/(K Pa)]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_Turner_Rsubrho *Turner Angle and Density Ratio*

Description

This uses the 75-term density equation. The values of Turner Angle Tu and density ratio Rrho are calculated at mid-point pressures, `p_mid`.

Usage

```
gsw_Turner_Rsubrho(SA, CT, p)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`CT`	Conservative Temperature [degC].
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

List containing Tu [degrees], Rsubrho [unitless], and p_mid [dbar]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_t_deriv_chem_potential_water_t_exact

Derivative of Chemical Potential of Water in Seawater wrt Temperature

---

Description

Derivative of Chemical Potential of Water in Seawater wrt Temperature

Usage

```
gsw_t_deriv_chem_potential_water_t_exact(SA, t, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
t	in-situ temperature (ITS-90) [degC]
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

derivative [J/(g*degC)]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

```

---

gsw_t_freezing *Freezing Temperature of Seawater*

Description

This uses the C function named gsw_t_freezing_exact, because the C function named gsw_t_freezing does not produce check values that match the Matlab function called gsw_t_freezing (see references for those test values).

Usage

```
gsw_t_freezing(SA, p, saturation_fraction = 1)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
saturation_fraction	fraction of air in water [unitless]

Value

in-situ freezing temperature (ITS-90) [degC]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. ```

`gsw_t_freezing_first_derivatives` *Derivatives of Freezing Water Properties*

Description

Derivatives of Freezing Water Properties

Usage

```
gsw_t_freezing_first_derivatives(SA, p, saturation_fraction = 1)
```

Arguments

`SA`	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
`p`	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
`saturation_fraction`	fraction of air in water [unitless]

Value

a list containing `tfreezing_SA` [K/(g/kg)], the derivative of freezing temperature with Absolute Salinity and `tfreezing_p` [K/dbar], the derivative with respect to pressure.

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

gsw_t_from_CT *In situ temperature from Conservative Temperature*

Description

In situ temperature from Conservative Temperature

Usage

```
gsw_t_from_CT(SA, CT, p)
```

Arguments

SA	Absolute Salinity [g/kg]. The valid range for most 'gsw' functions is 0 to 42 g/kg.
CT	Conservative Temperature [degC].
p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar

Value

in-situ temperature (ITS-90) [degC]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

```

---

gsw_z_from_p *Height from Pressure*

Description

Computation of height (above sea level) from pressure, using the 75-term equation for specific volume.

Usage

```
gsw_z_from_p(p, latitude, geo_strf_dyn_height, sea_surface_geopotential)
```

Arguments

p	sea pressure [dbar], i.e. absolute pressure [dbar] minus 10.1325 dbar
latitude	latitude in decimal degrees, positive to the north of the equator. (This is called `lat` in the TEOS-10 Matlab code.)
geo_strf_dyn_height	vector of same length as p and `latitude`, indicating dynamic height [m^2/s^2]. If not supplied, this defaults to a vector of 0 values, with length matching that of p.

sea_surface_geopotential
: vector of same length as p and latitude, indicating geopotential at zero sea pressure [m^2/s^2]. If not supplied, this defaults to a vector of 0 values, with length matching that of p.

Value

height [m]

Implementation Note

This R function uses a wrapper to a C function contained within the GSW-C system as updated 2022-10-11 at https://github.com/TEOS-10/GSW-C with git commit '657216dd4f5ea079b5f0e021a4163e2d26893371'.

The C function uses data from the library/gsw_data_v3_0.mat file provided in the GSW-Matlab source code, version 3.06-11. Unfortunately, this version of the mat file is no longer displayed on the TEOS-10.org website. Therefore, in the interests of making GSW-R be self-contained, a copy was downloaded from http://www.teos-10.org/software/gsw_matlab_v3_06_11.zip on 2022-05-25, the .mat file was stored in the developer/create_data directory of https://github.com/TEOS-10/GSW-R, and then the dataset used in GSW-R was created based on that .mat file.

Please consult http://www.teos-10.org to learn more about the various TEOS-10 software systems.

Historical Note

The geo_strf_dyn_height and sea_surface_geopotential parameters were added in GSW-R version 1.0-6.

```

saar *Global SA lookup file*

Description

This dataset is not intended for users, but rather for internal use within the gsw package. The dataset stores the 1.4M lookup table defined in the 8.3M file src/gsw_saar_data.c in the C library. (The .c file exceeds CRAN limitations on size.)

Details

The data are designed to replace C elements defined as below in src/gsw_saar_data.c:

```
static int gsw_nx=91, gsw_ny=45, gsw_nz=45;
static double longs_ref[91];
static double lats_ref[45];
static double p_ref[45];
static double ndepth_ref[4095];
static double saar_ref[184275];
static double delta_sa_ref[184275];
```

R storage is in a list named saar, with elements named as in the C code, i.e. gsw_nx etc.

C storage for these variables is allocated as needed, and the data are inserted, when gsw is launched. Thus, the existing C library code "knows" about the data as local storage, which keeps alterations to the C library to a minimum.

The saar dataset was created by the following R code. The netcdf file used in this code comes from the GSW-Fortran repository (at commit baa0c09ffc7ed1f74972a1a2902d8754caa5b4cb) and its md5 value is dacb3f981e8e710ac2e83477701b3905.

```
library(ncdf4)
nc <- nc_open("~/git/GSW-Fortran/test/gsw_data_v3_0.nc")
## Use as.vector() since these will all get handed into C, which does not understand matrices.
p_ref <- as.vector(ncvar_get(nc, "p_ref"))
lats_ref <- as.vector(ncvar_get(nc, "lats_ref"))
longs_ref <- as.vector(ncvar_get(nc, "longs_ref"))
ndepth_ref <- as.vector(ncvar_get(nc, "ndepth_ref"))
ndepth_ref[!is.finite(ndepth_ref)] <- -9e99
saar_ref <- as.vector(ncvar_get(nc, "SAAR_ref"))
saar_ref[!is.finite(saar_ref)] <- -9e99
delta_sa_ref <- as.vector(ncvar_get(nc, "deltaSA_ref"))
delta_sa_ref[!is.finite(delta_sa_ref)] <- -9e99
saar <- list(gsw_nx=gsw_nx, gsw_ny=gsw_ny, gsw_nz=gsw_nz,
        longs_ref=longs_ref, lats_ref=lats_ref, p_ref=p_ref, ndepth_ref=ndepth_ref,
             saar_ref=saar_ref, delta_sa_ref=delta_sa_ref)
save(saar, file="saar.rda")
tools::resaveRdaFiles("saar.rda")
nc_close(nc)
```
