Chapter 10

Housing

Chapter 10

Housing

Both the changes in the housing stock and the nature of housing reflect some of the characteristics of the population dealt with elsewhere in this atlas. The characteristics of the 296,719 housing units reported in Census 2010 include features such as whether individuals are homeowners or renters, and their age and race categories. The characteristics of the 293,492 housing units reported in the ACS 2006-2010 include features such as prevalent period built, housing type, value of owner-occupied and median monthly rent.

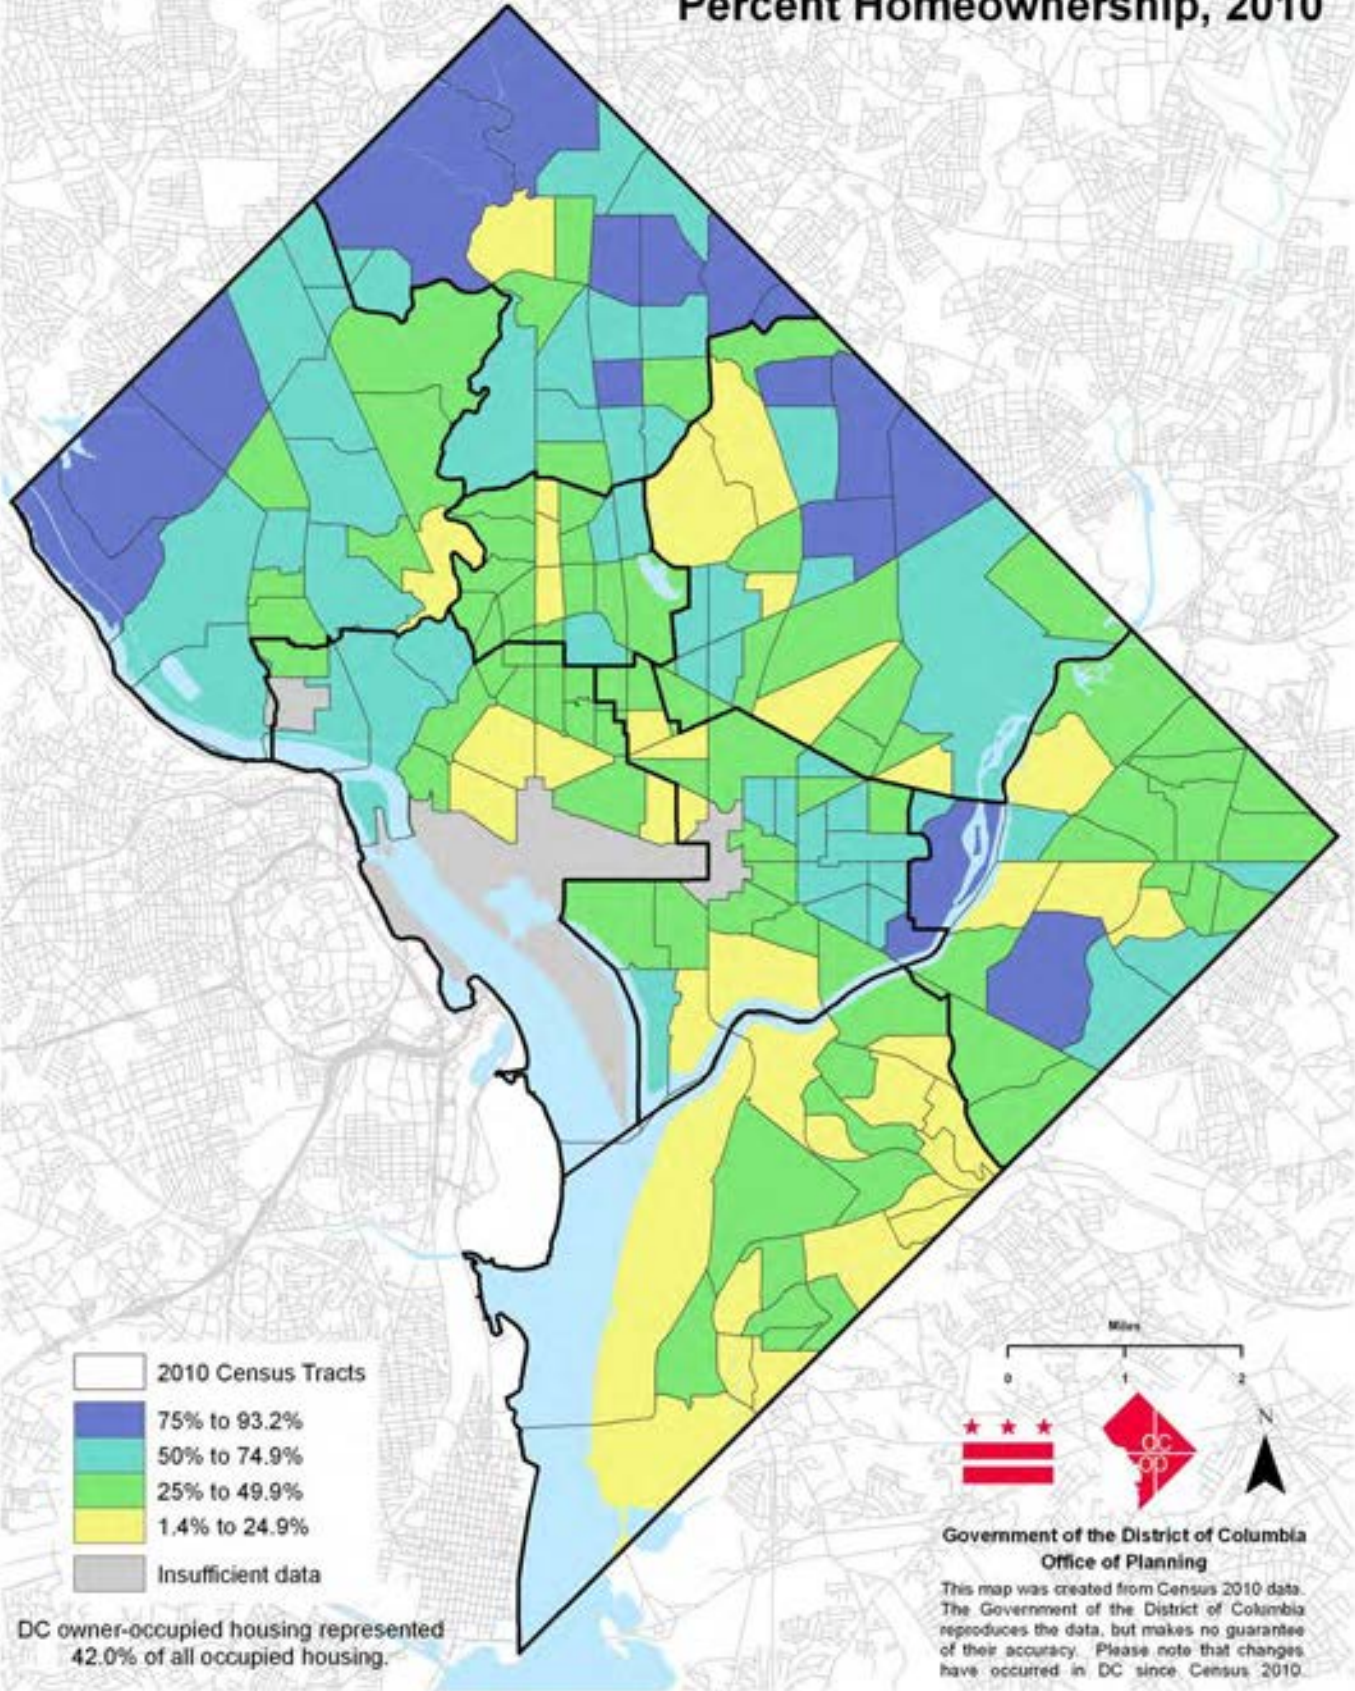

Occupied housing units are classified as either owned or rented. In 2010, homeownership rate displayed on Map **10-01** averaged 42 percent for the District, its highest rate recorded for the decennial census in the twentieth century. By census tract, homeownership rates ranged from a low of 1.4 percent to a high of 93.2 percent. Homeownership rates in 2010 also varied by race and Hispanic origin of the householder (Maps **10-03** to **10-06**). White non-Hispanic households had the highest homeownership rates in 2010, at 46.3 percent. Black households had the second highest homeownership rates at 44.1 percent, followed by Asian households and Hispanic households (typical immigrant population) at 3 percent and 2.1 percent, respectively. Homeownership by age reflects older homeowners occupying the older housing stock (Maps **10-09** and **10-15**), while the younger homeowners occupied more of the newly built housing stock (Maps **10-08** and **10-16**).

Renter-occupied housing units in the District of Columbia averaged 58 percent in 2010 with the heaviest concentration in census tracts in Ward 8 (Map **10-10**). The District has a much higher percentage of renter-occupied housing than at the national level where the average for 2010 was 33.8 percent. For the 2006-2010 period, the median monthly rent in the District was \$1,063 (Map **10-11**) and 40.7 percent of renters spent 35 percent or more of their income on rent (Map **10-12**).

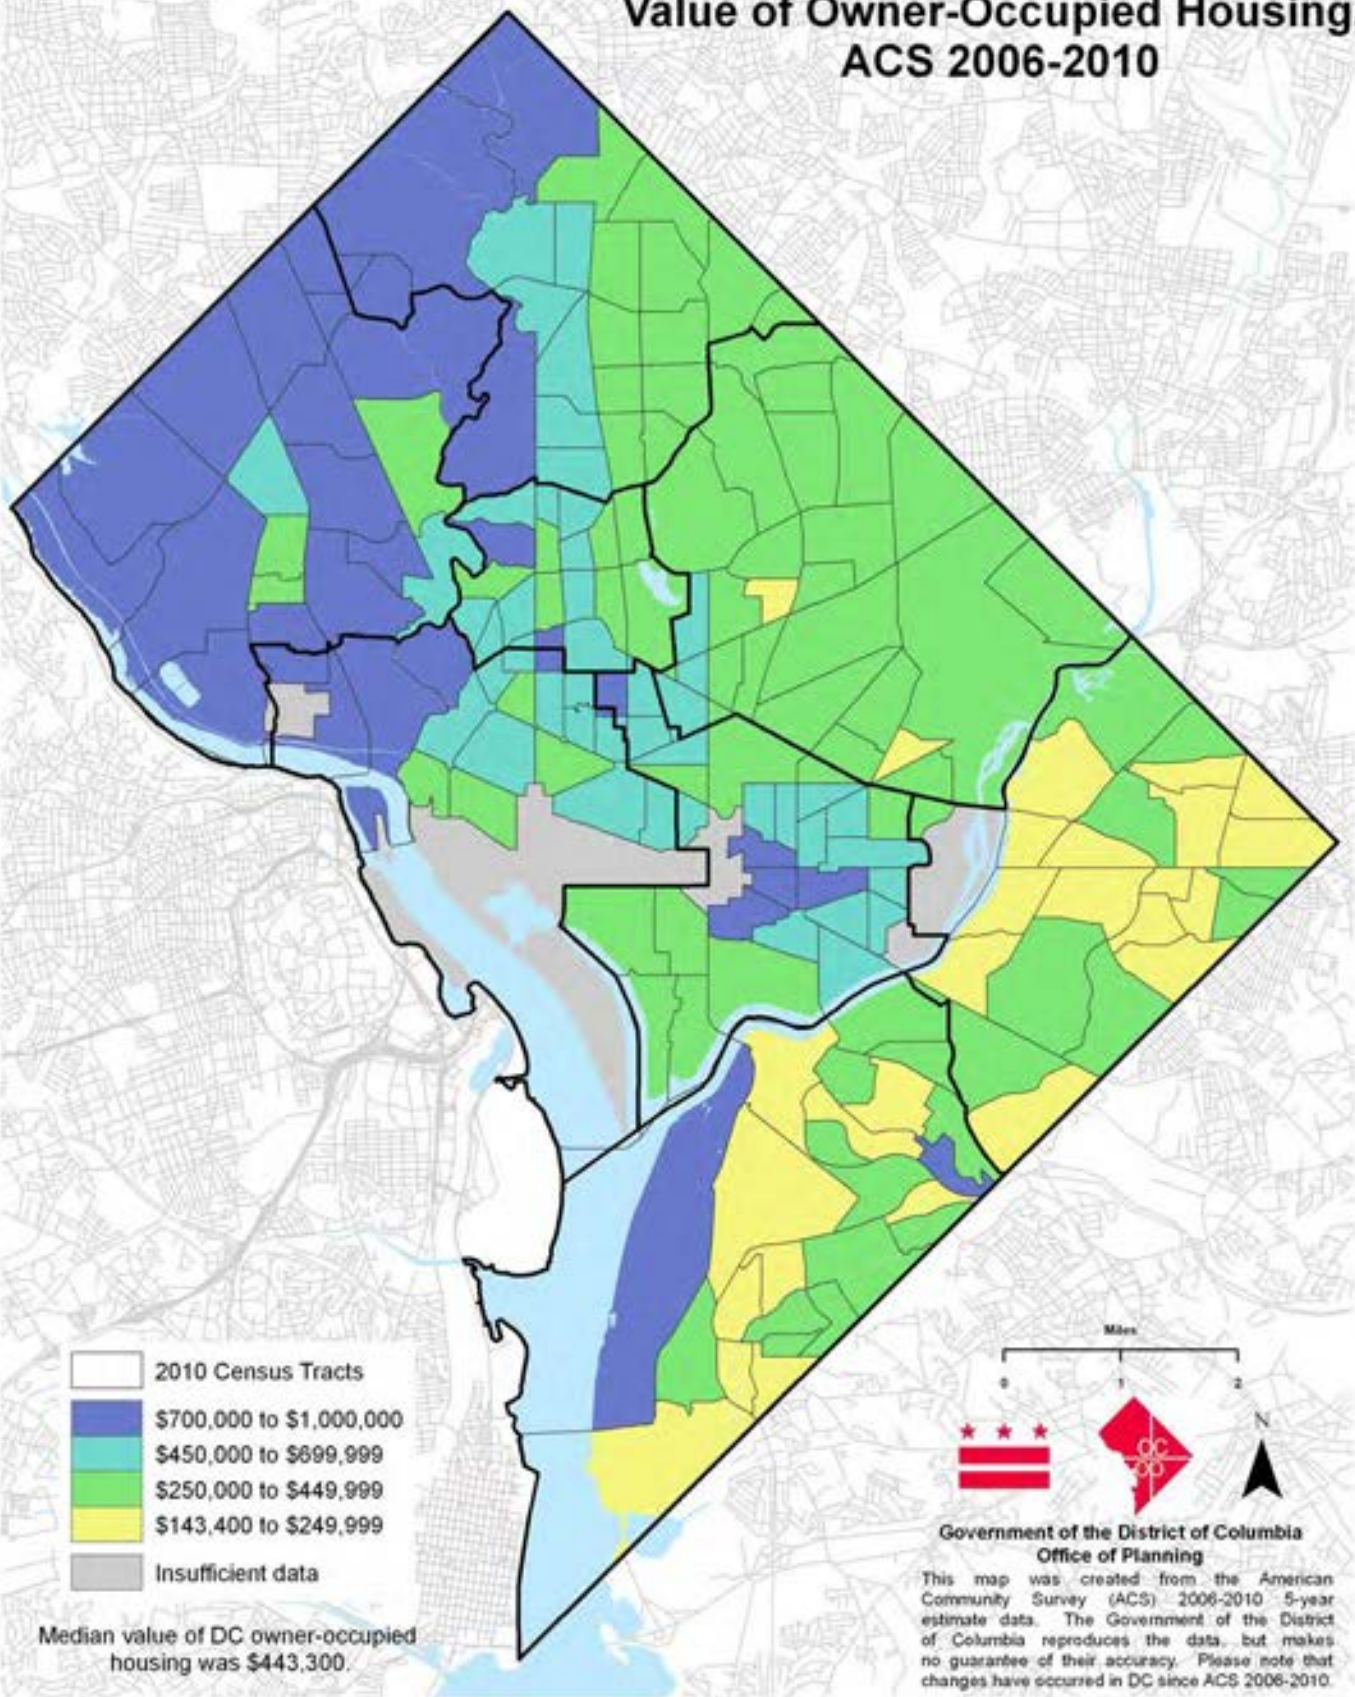

The two aspects of housing value depicted in Maps **10-02** and **10-13** show distinct patterns of higher valued housing in the northwest and areas along the Potomac River, and lower valued housing in the northeast and southeast areas of the city.

Looking at prevalent housing type in Map **10-14**, census tracts in certain corridors in the city showed dominant housing types be it single-family or multi-family units. However, the majority of housing in the city were 20 or more unit structures. Most houses in the city were built before 1940.

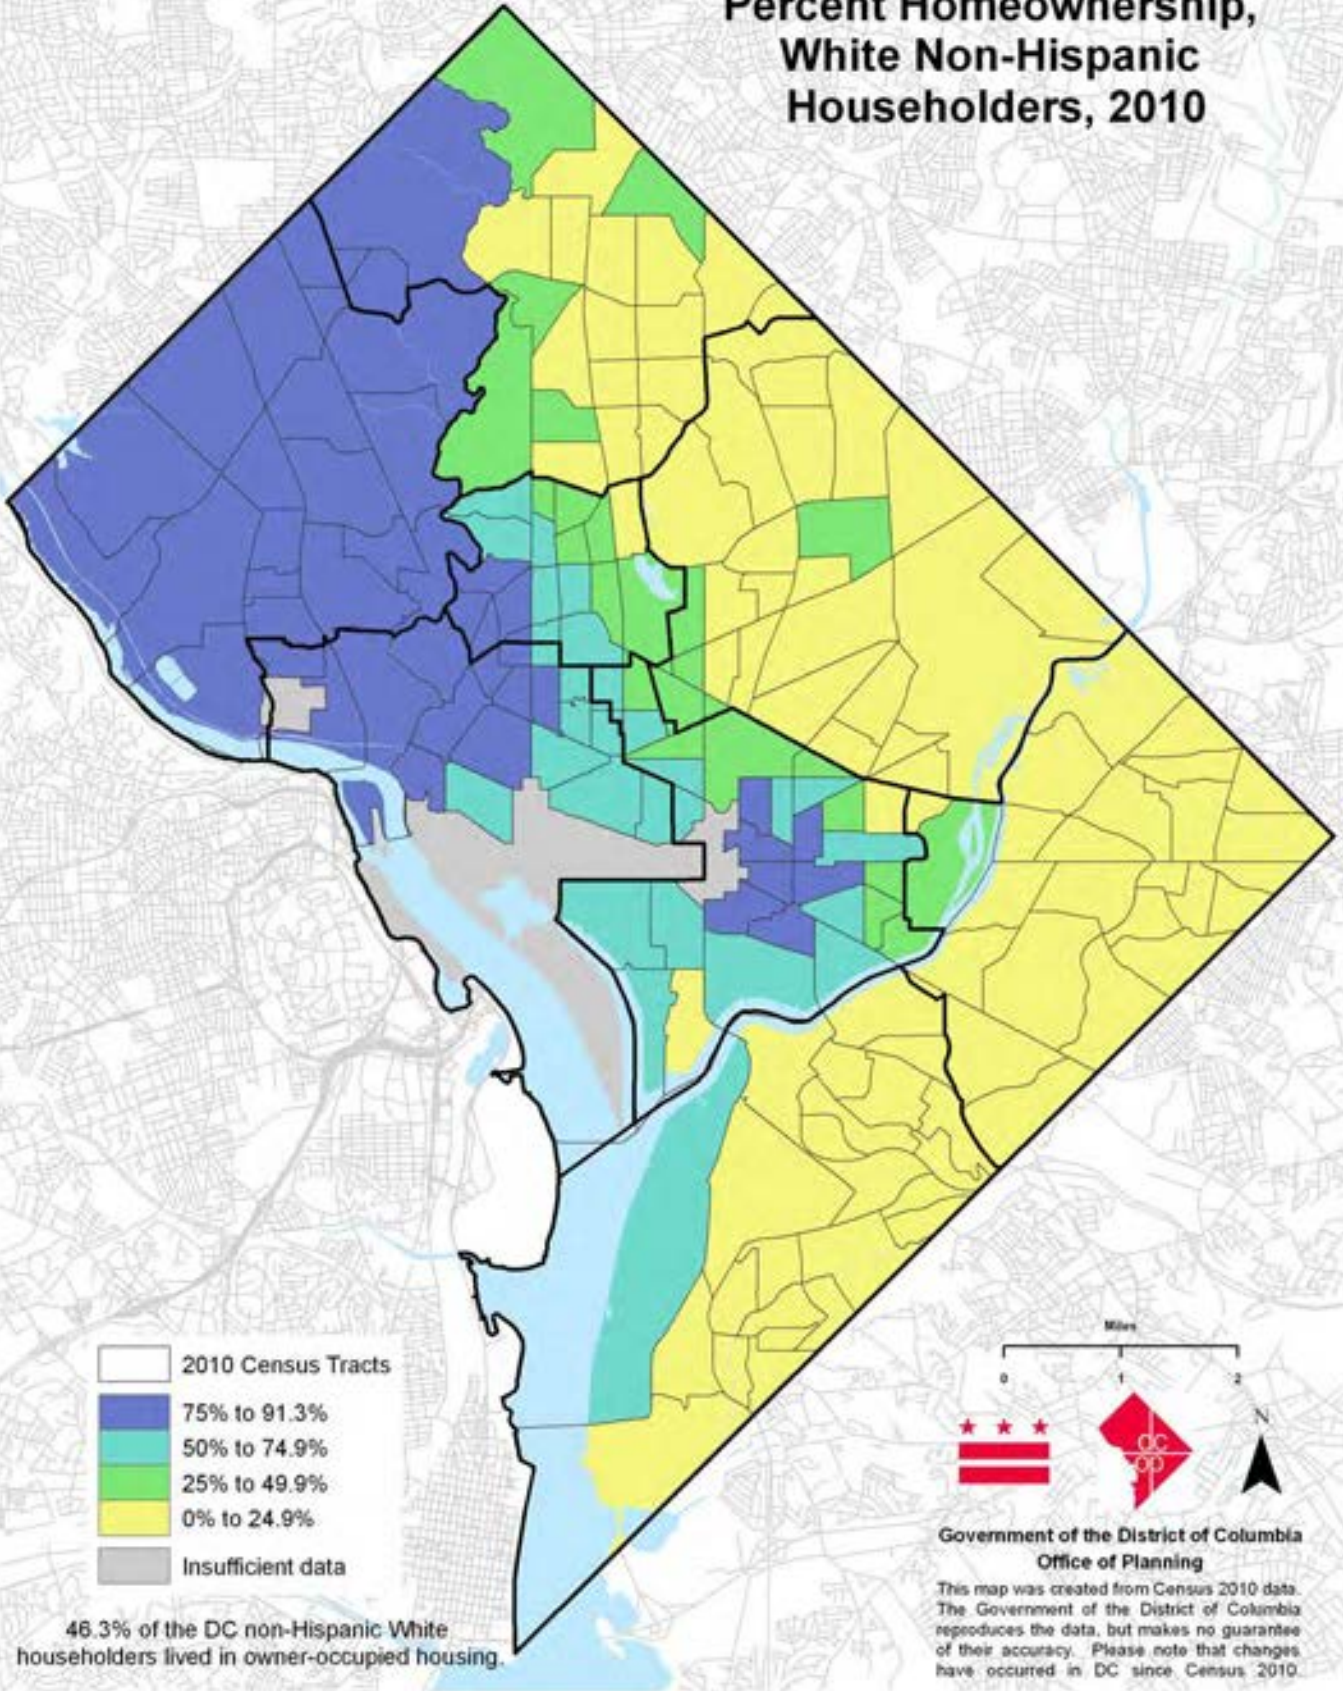

Percent Homeownership, 2010

Chapter 11

Forecast Data

Chapter 11

Forecast Data

The Traffic Analysis Zone (TAZ) forecast is done at various periods to support planning at many levels including transportation, water resource, air traffic, business and land use planning. The figures are based on demographic trends, projects under construction, projects in pre-development and conceptual phases, and the capacity of vacant land, and in turn, their proposed impact on population, households and employment.

Although the recession officially ended in 2009, the U.S. and local economies have yet to fully recover. The District fared better than many places throughout the recession. Population began growing again in the last decade and the economic crisis shifted the focus of financial activity somewhat from New York to the District. Housing was affected by the national collapse but sales of single family and condos have rebounded faster than other metropolitan areas. Prices are still below the peaks but the Washington DC metro area is one of the few metropolitan areas in the Case-Shiller housing price index that has had consistent positive growth recently. Commercial real estate has also outperformed expectations and the vacancy rate in the District is the lowest in the metropolitan area. The federal government's presence provides an important element of stability to the District's economy, but the current debate over the size of federal government and the momentum in Congress to drastically reduce spending to bring down the deficit is a serious risk to both the District economy and that of the wider metropolitan area.

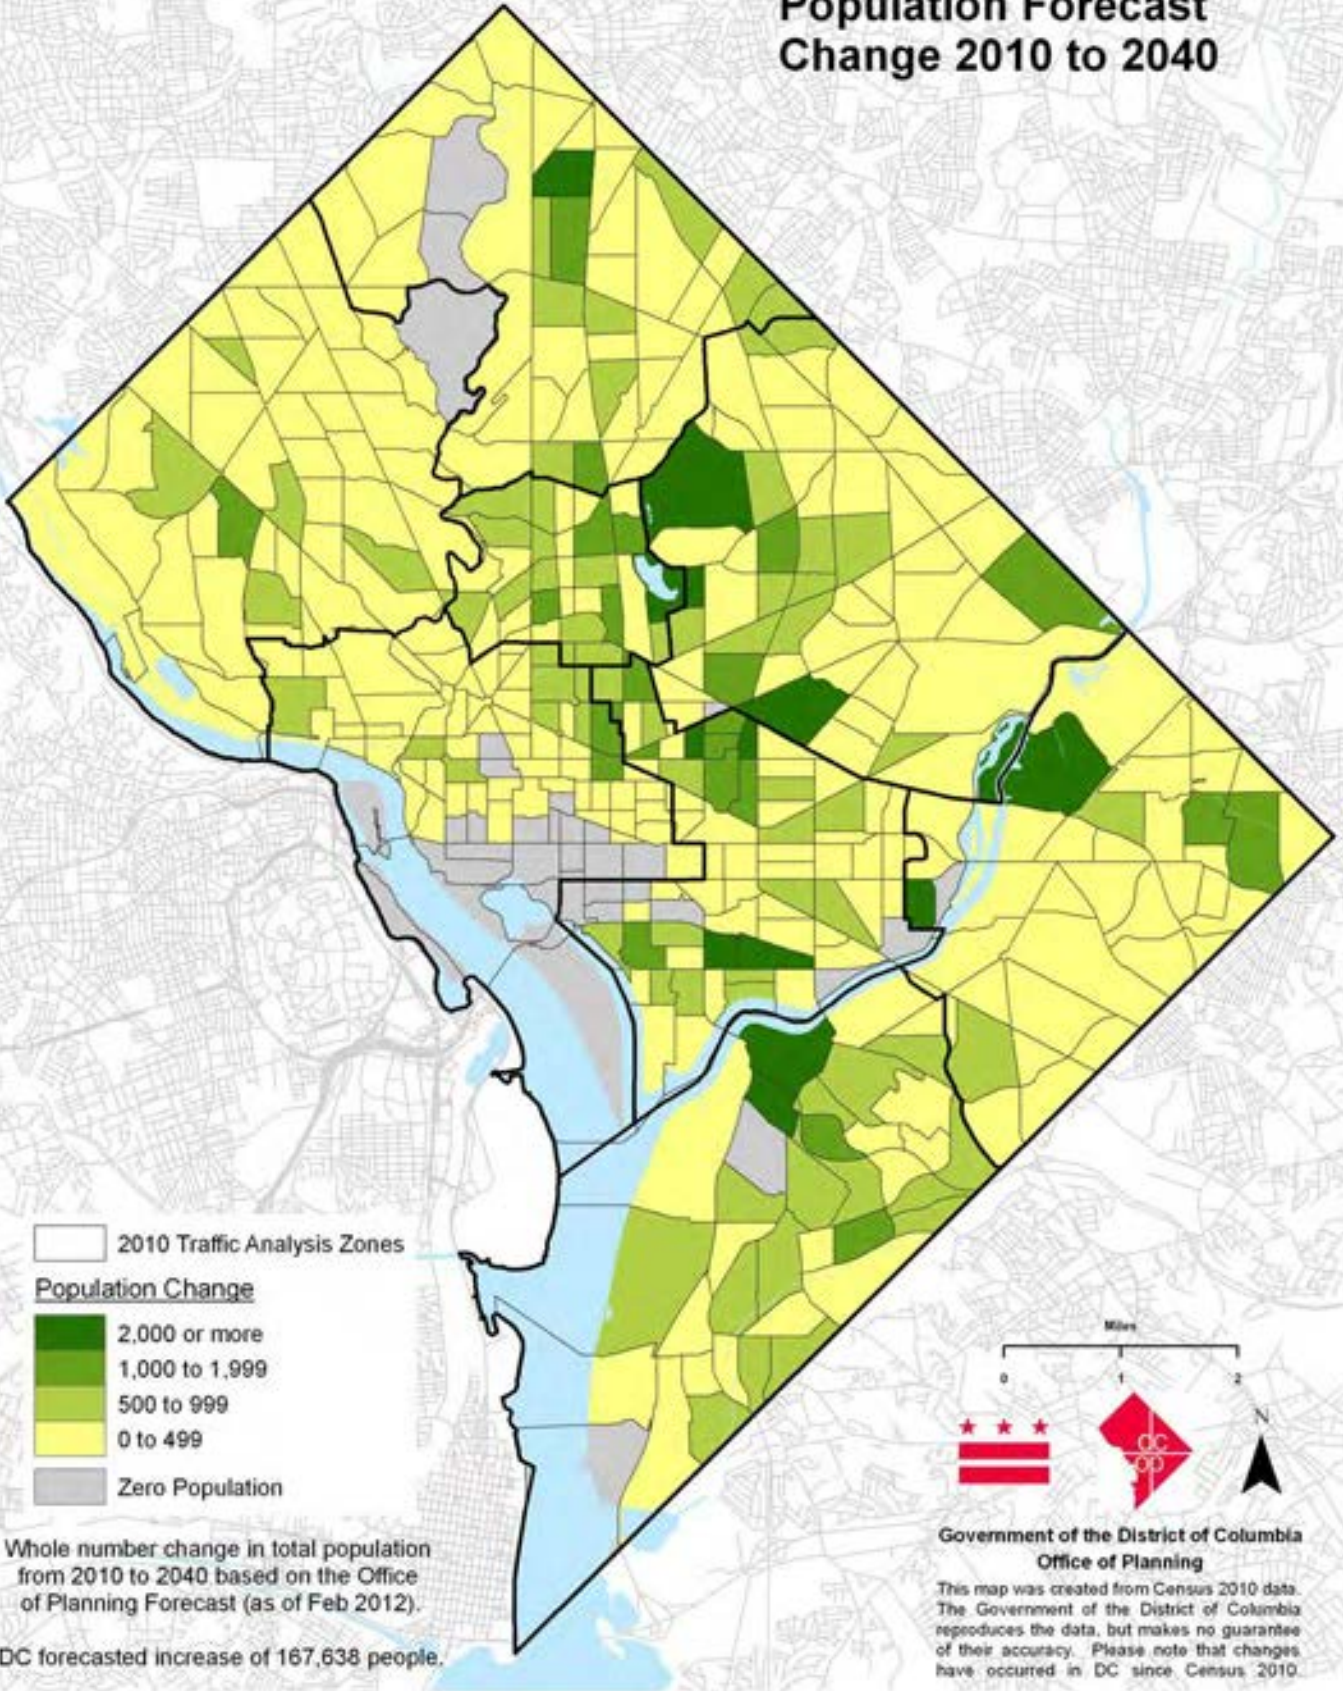

Population growth from 2010 through 2040 is forecast to increase by 26.4 percent, households by 25.8 percent and employment by 27 percent. To sustain and/or grow the population, households and employment as presented, some of the proposed policies, accomplishments and outlook that are predicted to have positive impacts are highlighted.

- The mayor's plan to fund universal Pre-K beginning in 2012 - this translates into free all-day day care for families with young children and the incentive to both maintain and attract families to the District.
- On accomplishments, in the past three years (2009-2011), according to the DC Comprehensive Assessment System (DC CAS), both elementary and secondary District of Columbia Public School (DCPS) students have made dramatic gains in scholastics test - as much as 17 percentage points - in reading and math. This trend is likely to continue and provide a further boost to families staying and wanting to move to the District.
- Enrollment numbers for the 2010-2011 school year showed the number of students attending DC Public Schools (DCPS) and public charter schools jumped by 3.5 percent. Enrollment in postsecondary institutions in the District has also shown tremendous increases.

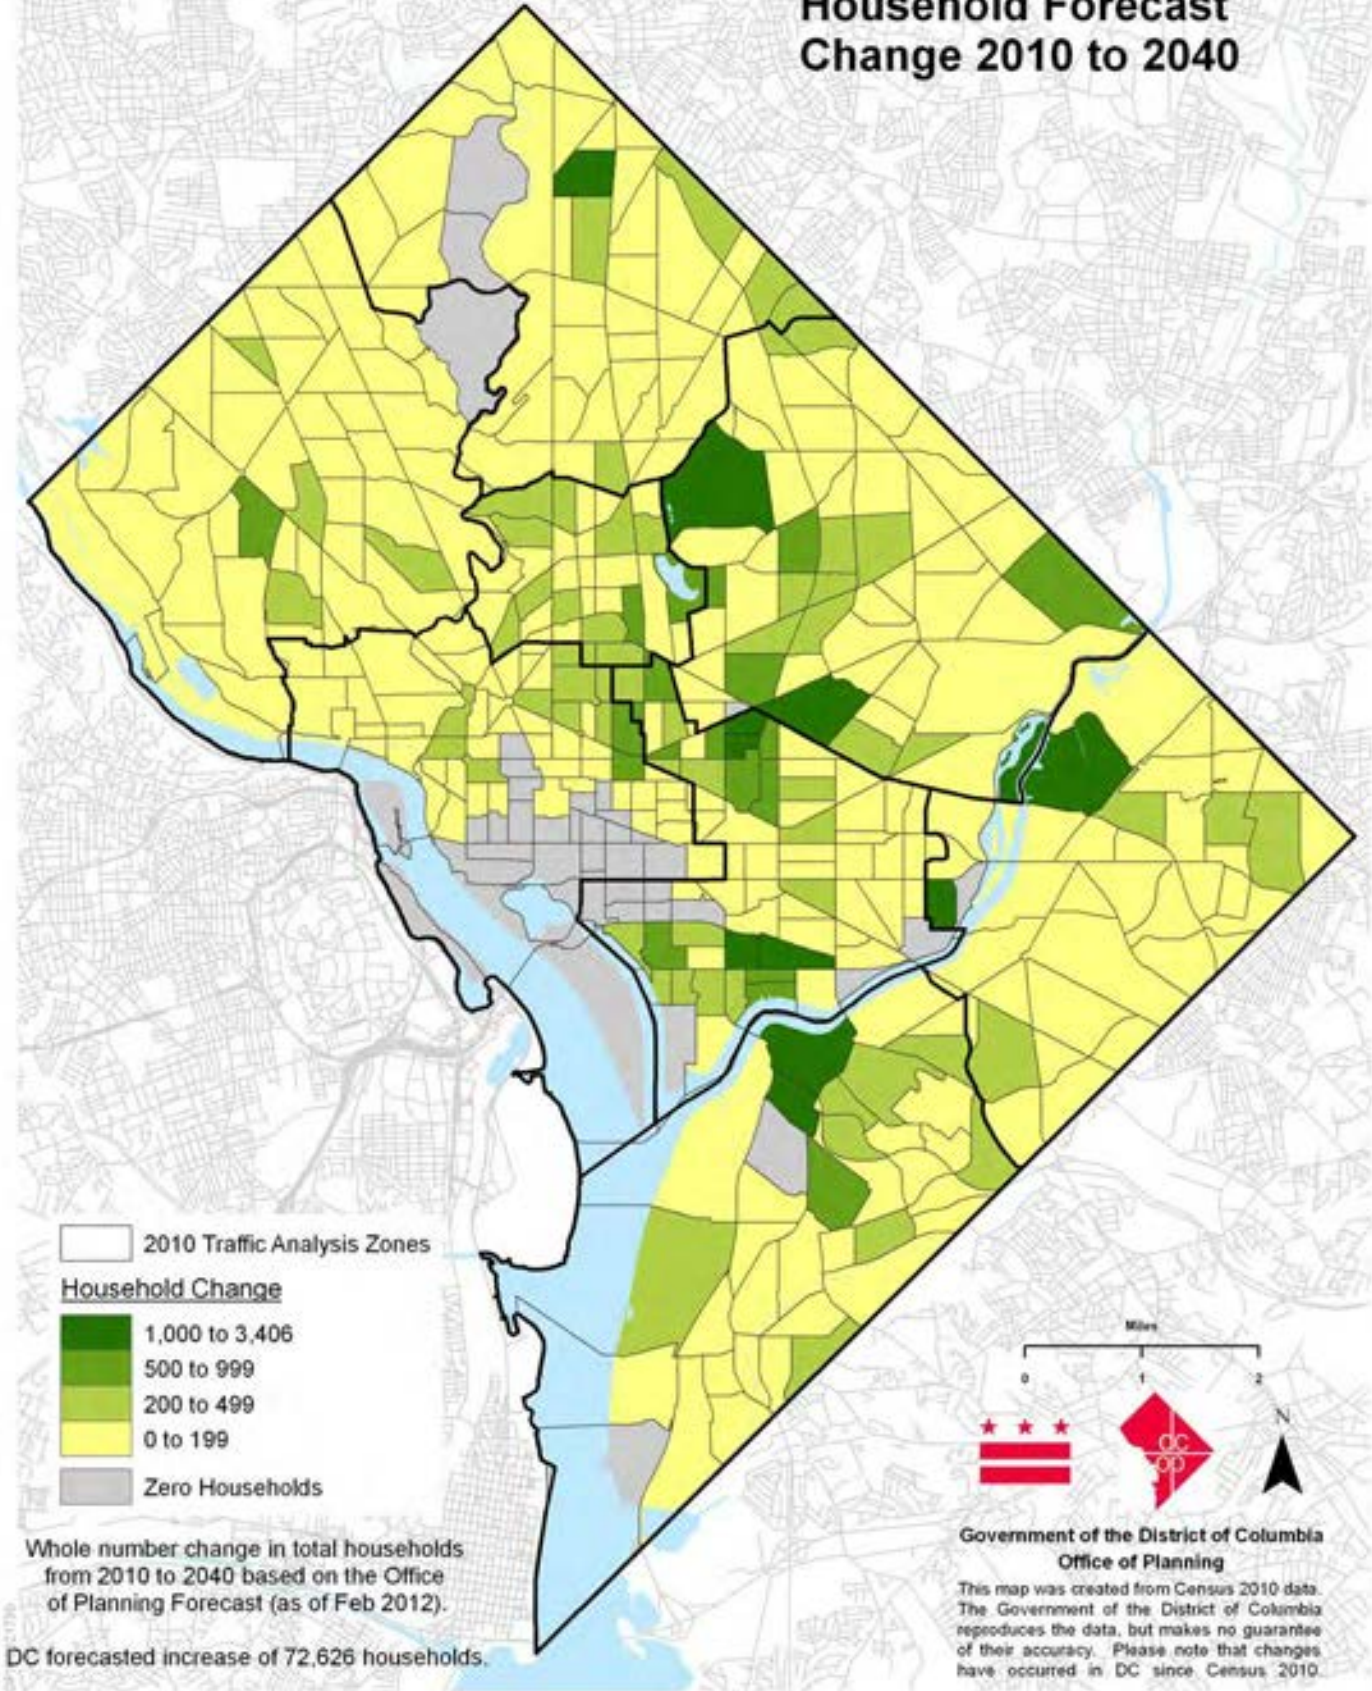

-
- The District has become a magnet for young people between the ages of 20 and 34 years old. According to the 2010 Census, the District population ages 20 to 34 increased by 35,200 or 23 percent between 2000 and 2010. Given the pull factors of job opportunities, abundance of choices for leisure and hospitality, rich cultural offerings and an eclectic international ambiance, one can foresee the District remaining an attraction for young people for years to come.
 - On the employment front, both the national and the local picture points to significant job gains as economic growth picks up after the recession and supports a brighter outlook for long-term unemployment.

Altogether, the forecast is for a very resilient economy in the District of Columbia, weathering the storms in both the national financial markets and the global economy, and continuing to grow along with the nation as economic growth picks up after the recession.

Employment Forecast Change 2010 to 2040

Data Tables

Data Tables

The following tables present the data used to create the maps in this Atlas. The data table numbers correspond to the chapter number where the associated maps can be found. For example, Tables 1a, 1b, and 1c correspond to the maps in Chapter 1, Tables 2a-2c correspond to maps in Chapter 2, and so on.

Three data sources were used to create the Atlas maps: the 2010 Decennial Census, the American Community Survey (ACS) 2006-2010 5-year estimates, and the Round 8.1 population, households and employment forecasts produced by the Office of Planning, State Data Center.

- Tables 1-5 represent data from the 2010 decennial census.
- Tables 6-10 represent data from the American Community Survey 2006-2010 5-year estimates.
- Table 11 represents data from the Round 8.1 forecast produced by the Office of Planning, State Data Center.

For maps created using American Community Survey (ACS) 2006-2010 5-year estimates, the tables present both estimates and Margins of Error (MOE). Due to the difficulty in representing MOE graphically, only the estimates are displayed on the Atlas maps. Please refer to the tables for MOE information when interpreting these maps.

Tables which present Census 2010 data do not include MOE as the 2010 decennial census represents a population count, not a sample.

Margin of Error

For any survey where random sampling was employed, there will be some error in the estimates. This error is represented by the Margin of Error (MOE). MOE is the difference between an estimate and its upper or lower limit known as confidence bounds. Confidence bounds can be created by adding the MOE to the estimate for the upper bound and subtracting the MOE from the estimate for the lower bound. Estimates with smaller MOE are more accurate, while estimates with larger MOE are less accurate. ACS estimates are always presented with a MOE.

Confidence Intervals

A confidence interval (CI) is the range that is expected to contain the average value of the characteristic that would result over all possible samples with a known probability. This probability is called the “level of confidence” or “confidence level.” The Census Bureau statistical standard for published data is to use the 90-percent confidence level. Thus, the MOEs published with the ACS estimates correspond to a 90-percent confidence level.

Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-year Estimates

An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.

An “-” entry indicates insufficient data.

An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.

An “-” entry indicates insufficient data.

 An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.
 An “-” entry indicates insufficient data.

 An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.
 An “-” entry indicates insufficient data.

An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.

An “-” entry indicates insufficient data.

An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.

An “-” entry indicates insufficient data.

 An “**” entry in the margin of error column indicates that the margin of error was unable to be calculated for that value.
 An “-” entry indicates insufficient data.

† Source: U.S. Census Bureau, Census 2010 ‡ Source: U.S. Census Bureau, 2006-2010 American Community Survey 5-year Estimates
 An ‘****’ entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
 An ‘-’ entry indicates insufficient data.

An "***" entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.

An "-" entry indicates insufficient data.

Glossary

Glossary

Ability to Speak English

For respondents who speak a language other than English at home, a self-assessment of English speaking ability, from “very well” to “not at all.”

Advisory Neighborhood Commissions (ANCs)

Advisory Neighborhood Commissions (ANCs) are bodies of local government established by the Council in accordance with the District of Columbia Self-Government and Government Reorganization Act of 1973. At present there are 40 ANCs whose function is to advise the District government on matters of public policy and to review and make recommendations on matters affecting their neighborhoods such as traffic, parking, recreation, street improvements, liquor licenses, zoning, economic development, police protection, sanitation and trash collection, and the District’s annual budget. ANCs are subdivided into smaller areas (with populations of approximately 2,000 residents) called Single Member Districts (SMDs). There are currently 296 SMDs.

American Indian and Alaska Native (AIAN)

A person with origins in any of the original peoples of North and South America (including Central America) who maintains tribal affiliation or community attachment. American Indian includes people who indicated their race as American Indian, entered the name of an Indian tribe, or reported such entries as Canadian Indian and Spanish-American Indian. Alaska Native includes written responses of Eskimos, Aleuts, and Alaska Indians, as well as entries such as Arctic Slope and Inupiat.

Ancestry

A person’s self-identification of heritage, ethnic origin, descent, or close identification to an ethnic group. Examples of ancestry groups are Arab, Brazilian, Canadian, Czech, Irish, Italian, Russian, Sub-Saharan African, and West Indian.

Census Tract

A small, relatively permanent statistical subdivision of an area federally delineated for the purpose of presenting data. Census tract boundaries normally follow visible features, but may follow governmental unit boundaries and other nonvisible features, and they always nest within counties or county equivalent. They are designed to be relatively homogeneous units with respect to population characteristics, economic status, and living conditions at the time of establishment. Census tracts average about 4,000 inhabitants.

Family Household

A householder and one or more people living together in the same household, and related to the householder by birth, marriage, or adoption. All people in a household who are related to the householder are regarded as members of his or her family. A family household may contain people not related to the householder, but those people are not included as part of the householders family in census tabulations.

Group Quarter Population

The U.S. Census Bureau classifies all people not living in households as living in group quarters. There are two types of group quarters: institutional (for example, correctional facilities, nursing homes, and mental hospitals) and non-institutional (for example, college dormitories, military barracks, group homes, missions, and shelters).

Hispanic or Latino Origin

The terms “Hispanic,” “Latino,” and “Spanish” are used interchangeably. Some respondents identify with all three terms while others may identify with only one of these three specific terms. Hispanics or Latinos who identify with the terms “Hispanic,” “Latino,” or “Spanish” are those who classify themselves in one of the specific Hispanic, Latino, or Spanish categories listed on the questionnaire (“Mexican,” “Puerto Rican,” or “Cuban”) as well as those who indicate that they are “another Hispanic, Latino, or Spanish origin.” People who identify their origin as “Hispanic,” “Latino,” or “Spanish” may be any race.

Housing Unit

A house, apartment, mobile home, group of rooms, or single room that is occupied, or intended for occupancy, as separate living quarters. In separate living quarters, occupants live separately from any other people in the building and have direct access to the quarters from outside the building or through a common hall.

Native Hawaiian or Other Pacific Islander

A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands. It includes people who indicate their race as “Native Hawaiian,” “Guamanian or Chamorro,” “Samoan,” and “Other Pacific Islander” or provide other detailed Pacific Islander responses.

Native Population

People born in the United States, Puerto Rico, U.S. Virgin Islands, Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands. The native population also includes people born in a foreign country to at least one U.S.-citizen parent.

Older Population Dependency Ratio

Also referred to as the old-age dependency ratio in traditional demographic literature, this measure is derived in this book by dividing the population 65 years and older by the 18-to-64 population and multiplying by 100, it is the number of people 65 and older per 100 people aged 18 to 64.

See also Total dependency ratio, Youth dependency ratio.

Poverty

Poverty status is determined by comparing total family Income with the poverty threshold appropriate to the family's size and composition, if the total income of a family is less than the threshold appropriate to the family, then the family and all individuals in the family are considered to have income below the poverty level ("living in poverty").

Race

Race alone includes the five single-race categories required by the federal Office of Management and Budget (OMB) (White alone, Black or African American alone, American Indian or Alaska Native alone, Asian alone, and Native Hawaiian or Other Pacific Islander alone), plus the Some Other Race alone category (included by the U.S. Census Bureau with the approval of the OMB). Race alone-or-in-combination includes people who marked only one race (a "race alone" category) and also those who marked that race and at least one other race.

Sex Ratio

A measure derived by dividing the total number of males by the total number of females, then multiplying by 100.

Single Member Districts (SMDs)

Advisory Neighborhood Commissions (ANCs) are subdivided into smaller areas (with populations of approximately 2,000 residents) called Single Member Districts (SMDs). There are currently 296 SMDs. *See Advisory Neighborhood Commissions (ANCs).*

Total Dependency Ratio

Also known as the age dependency ratio, this measure is derived by dividing the combined under-age-18 and 65-and-older population by the 18-to-64-year-old population and multiplying by 100. The total dependency ratio is based on the proportion of people in different age groups, as opposed to different economic groups, and should not be confused with the economic dependency ratio. Even though the total dependency ratio is specific to age, it is commonly used as a demographic proxy that could indicate economic dependency.

Traffic Analysis Zones (TAZ)

A statistical entity delineated by state and/or local transportation officials for tabulating traffic-related census data. A TAZ usually consists of one or more census blocks, block-groups, or census tracts. There are currently 393 TAZs.

Wards

These are political subdivisions of the District of Columbia, created for the purpose of voting and representation. Ward boundaries were first established in 1801 and were redrawn on several occasions. The eight Ward boundaries shown in this document are as approved by the Council of the District of Columbia in 2011, and went into effect January 1, 2012. Ward boundaries are updated approximately every ten years, based on population changes reported by the U.S. Census Bureau.

Youth Dependency Ratio

Also referred to as the child dependency ratio in traditional demographic literature, this is derived by dividing the population under age 18 by the 18-to-64 year old population and multiplying by 100. It is the number of people under age 18 per 100 people aged 18 to 64.
