Secure your cloud migration with Wiz

The unified platform to scale security alongside your AWS cloud migration

The time to scale your cloud security is now

Migrating to Amazon Web Services (AWS) is an all-hands initiative, requiring security and development teams. While the effort may seem complex at first, the benefits are clear: A cloud environment paves the way for greater speed and pace of innovation, helping teams move faster and deliver better products.

The dynamic, distributed nature of the cloud makes it essential to build strong security practices into your AWS migration from the beginning. Security teams need full visibility and centralized control over environments. They also need tools for real-time monitoring and proactive threat detection. By introducing cloud-native security early in your migration, security can ramp in sync with development, ensuring a robust posture as your company scales.

Wiz streamlines and safeguards the migration journey

Wiz helps organizations of all sizes secure their environment, enhancing the abilities of cloud builders and cloud defenders to ensure migration is a success.

Wiz is the one of the only agentless, graph-based Cloud Native Application Protection Platforms (CNAPPs) that provides 100% visibility, ruthless risk prioritization, and time-to-value across teams. By scanning AWS services, Wiz provides a full-stack view of your cloud ecosystem in minutes. Wiz empowers your teams to quickly identify, prioritize, and target risks in a matter of clicks.

"As we were introduced to Wiz, one of the most impressive things was that within a day of deployment it worked across our entire environment and showed us a set of critical findings that everyone should prioritize immediately. Wiz strikes the right balance between providing high-level visibility into our whole cloud posture and giving engineers the hands-on capabilities to resolve issues on the ground."

Your roadmap for reducing cloud risk

Get your security posture right—the first time. Wiz provides visibility and risk analysis during migration that helps you understand how your cloud environment should be configured and how teams should work together.

Full-stack visibility

See the bigger picture from day one of migration. Wiz scans and analyzes all layers of your cloud environment to provide a detailed inventory of resources across multiple AWS services.

Remediation instructions

Not only does Wiz detect risks, but it also provides detailed remediation instructions for each identified issue. Your teams can quickly and effectively resolve issues without delaying the migration process.

Prioritized risks

By running deep risk assessment across misconfigurations, vulnerabilities, identities, data, secrets, and malware and correlating risks on the Wiz Security Graph, Wiz cuts out the noise and helps your security teams identify and rank threats based on impact. When Wiz says it's critical—it actually is.

Unmatched time-to-value

Wiz helps you migrate swiftly and safely with an enhanced security posture. An agentless setup and deep integrations with AWS mean less silos, more teamwork, and less time to achieve full operational security.

Wiz and AWS work better together

As an AWS Security Competency Partner and 2023 Marketplace Partner of the Year, Wiz is committed to effectively reducing risk for AWS customers by seamlessly integrating into AWS services. The AWS Partner Network (APN) designation recognizes Wiz's deep technical expertise and success with AWS. It's part of the reason why 600+ AWS customers and 40% of Fortune 100 companies use Wiz to enhance their security postures.

Together, Wiz and AWS deliver a robust security framework that aligns with AWS's architectural best practices, ensuring that organizations can scale securely and maintain compliance throughout their cloud journey.

Set your migration up for success with Wiz on AWS

Wiz integrates with 50+ AWS services to bolster security and remove barriers at every step of the cloud migration process.
