Nice

Smart Home
The connected you

An integrated system that makes home automations communicate with each other: simple, efficient, connected.

Nice

Your home learns to smile at you. And to know you.

All your habits, all your desires, just a click away.

We've dedicated it to the eternally absent-minded and to the methodical; to you who are always in a rush and to him who loves the slow life.
To those who dream while watching the lights in the garden and those who post their first Instagram story at dawn with the aroma of coffee. To those who love the planet and those who love pizza and beer. To the ever-different families made of smiles.

For those who want it comfortable, for those who want it #design and for those who want it #savetheplanet.

A system connected through a flexible, integrable and ultra-easy hub to programme your home and your life with all the efficiency of those who really understand about automations for a connected world.

Freedom is a state of mind, take it with you. Wherever you go.

Let yourself be carried away by a connected home.

We design for a free world, for a clean planet, for travellers and for explorers: we create systems so your home can communicate with you at all times and from all places.

Breathe in all the sunsets you've been looking for and taste the flavours of every culture with the peace of mind that comes from knowing that all it takes is your voice for every device in your home to communicate with the others and let you control it remotely.
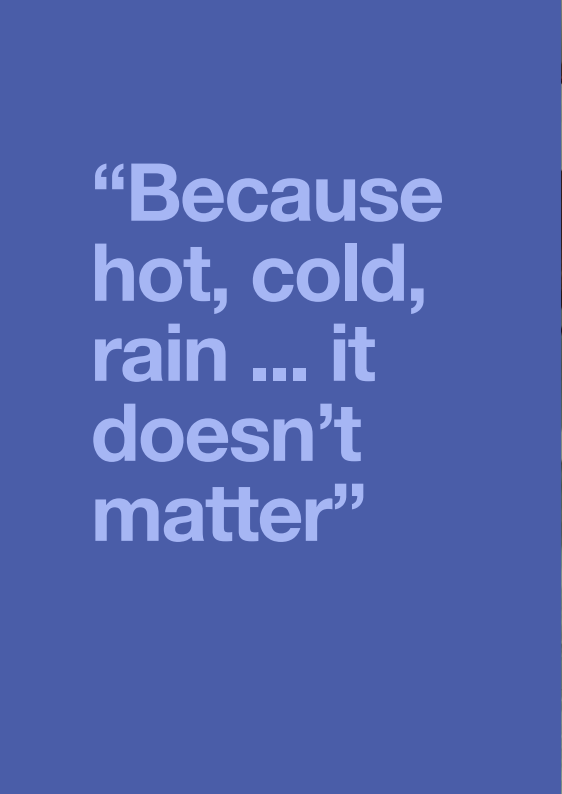

When you get back, everything will be ready to welcome you to a smart, connected home that unites our automations in a single, reliable, easy-to-use and fully customisable system.
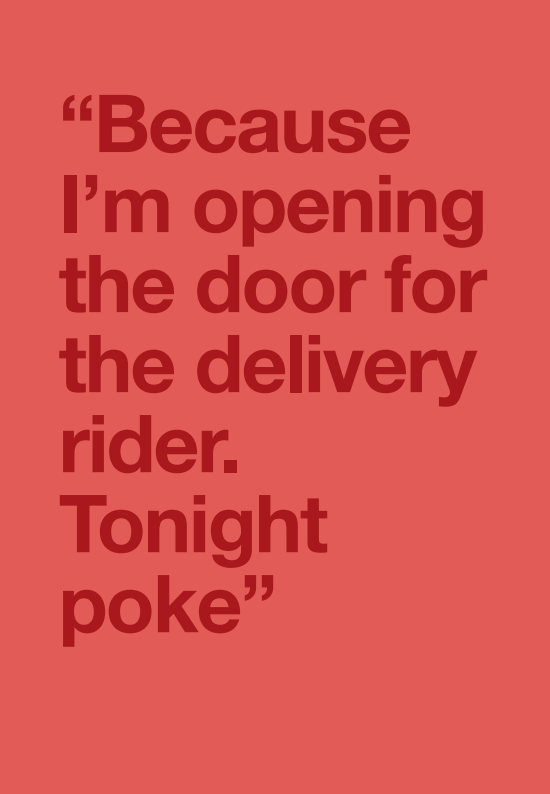

"Because my voice is all it takes to let the sun in"

"Because Pongo wakes up earlier than I do"

"Because hot, cold, rain ... it doesn't matter"

"Because I'm opening the door for the delivery rider. Tonight poke"

"**Because I'm far away, but my home's here with me**"

The only limit is your imagination.

There is no one Nice smart home system, but just yours: because we know that no two people are exactly the same and we want to give you the freedom to explore the thousands of possibilities of the freest and safest hub there is.

Do you want to come home at dawn after a concert or spend the morning in bed? Do you want to programme when the blinds open, or the lights in the garden come on? Do you want to enjoy the air conditioning, or open the door to the delivery rider without getting up from the sofa?
The Nice smart home system is modular: you can start with one automation and expand it over time, even with your existing automations. Simple, isn't it?

Relaxation & control

All the controls you need to manage your home even remotely: programme alerts, receive them on your smartphone and intervene with a single command to make sure everything works perfectly.
So you're more carefree while you work and go home with a smile.

It starts to rain, you receive an alert and lower the outside vertical awnings.

Is the temperature in the house too high, or is it too humid? You can adjust the thermostat and activate the dehumidifier.

The outdoor sensor detects a suspicious movement in the garden, you receive an alert so you can make sure it was only your dog .

The children come home with the babysitter, as soon as the doorbell rings, you receive an alert so you can open the gate and door and deactivate the alarm.

#workingmom

When you're away from home, but want to make sure everything runs smoothly.
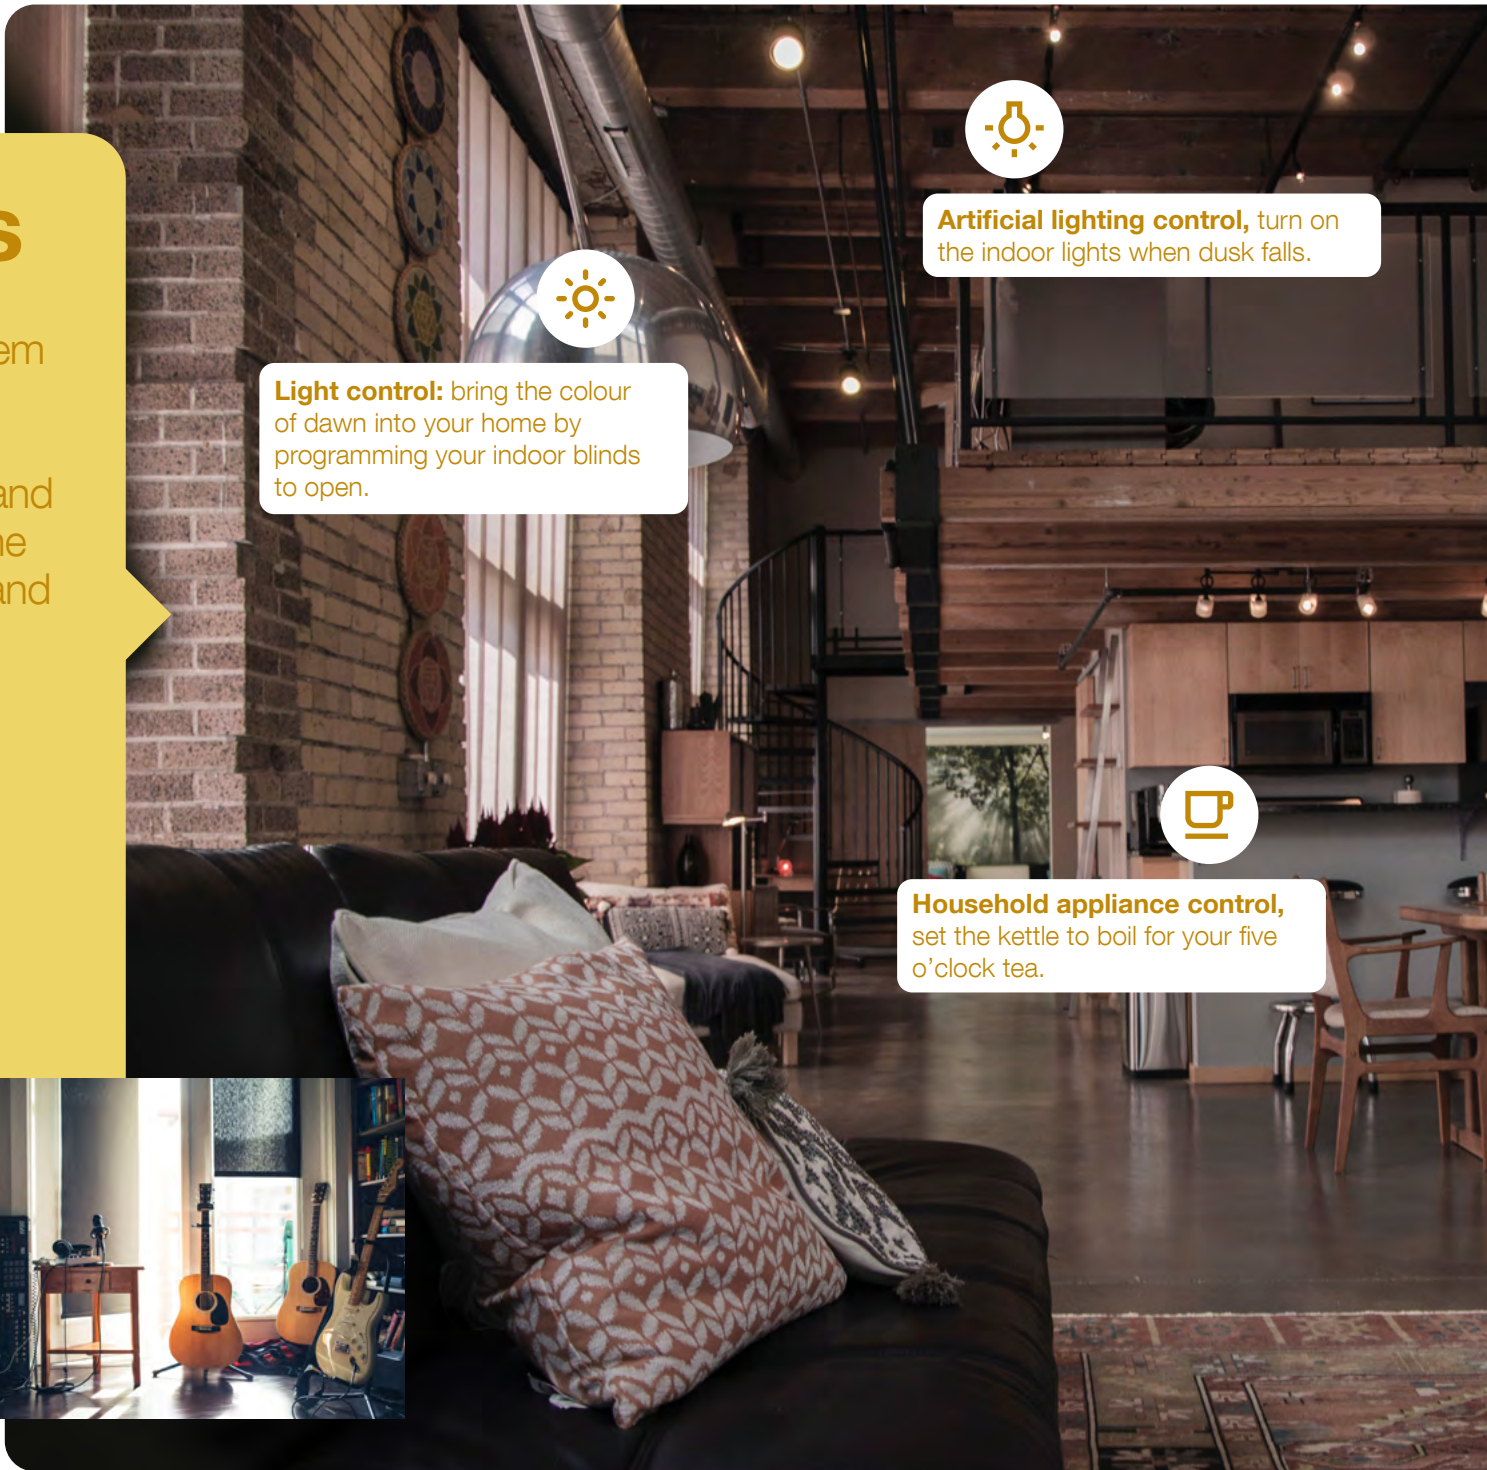

Balancing home, family, career and commitments: working women are always being asked to make an extra effort... and sometimes they're the ones who demand it of themselves.

With our smart home system, Giulia can control every single aspect of the home automation system from her smartphone and programme or change each detail: so she can enjoy plenty of worry-free family time.

Nice

No distractions

We've designed a smart home system that can expand and adapt to your habits, so you can work at home without being distracted by a thousand little tasks and enjoy your daily routine by programming every detail easily and flexibly.

Artificial lighting control, turn on the indoor lights when dusk falls.

Light control: bring the colour of dawn into your home by programming your indoor blinds to open.

Household appliance control, set the kettle to boil for your five o'clock tea.

10

#musician

Free to concentrate while everything around you works perfectly.

TV control, so you don't miss the start of your favourite music contest.

With smart working and new habits, we've transformed our home spaces into an office: better avoid being distracted by the dryer during an important call, don't you agree?

Phil, a bluesman from Seattle, manages his home even while he's busy recording. Simply and easily.

Moments of independence

With our smart home system you can transform control into peace of mind by detecting all kinds of event and receiving immediate alerts. You can programme scenarios and ensure that those with limited autonomy can lead a serene, independent and safe life.

Video security: programme and manage intrusion detection systems with peace of mind.

Smoke sensor: anyone can be distracted while cooking, but the smoke sensor immediately sends an alert and activates the ventilation.

Rolling shutters and blinds: a single control effortlessly raises or lowers all the home's rolling shutters, even in differentiated groups.

Voice assistant: no need to get up, you can also control the smart home system by voice commands.

CO

Air sensors. Too much carbon monoxide? The sensor sends an alert and activates the ventilation.

#goldenage

Because safety is about control and convenience, even remotely.

The time has come to enjoy the golden years and we want Andrea, Laura and their family to spend them comfortably, safely and peacefully.

For their smart home, we've created a highly integrated system easily controlled by voice commands, so many tasks can be done without any physical effort. The system is not just practical, but also very safe, guaranteeing their children peace of mind, even when they're far away: if something goes wrong, they'll immediately receive an alert.

To each his own

Many different needs in the family? There's room for everyone in the smart home system and everyone gets all the attention they need: you can programme for Marta the sports enthusiast, for Paolo the food blogger, for the kids who love talent shows and even for kitty, who comes home at all hours.

6:30 - Marta gets up early for her fitness exercises and the blinds are already open.

7:30 - Giulia goes out for her hour of jogging, taking nothing with her but her smartwatch which opens and closes the gate.

17:30 - The kids have finished their homework and they know the TV will go off when their time is up.

12:00 - Franco is preparing his cookery video with the soundtrack he chose yesterday.
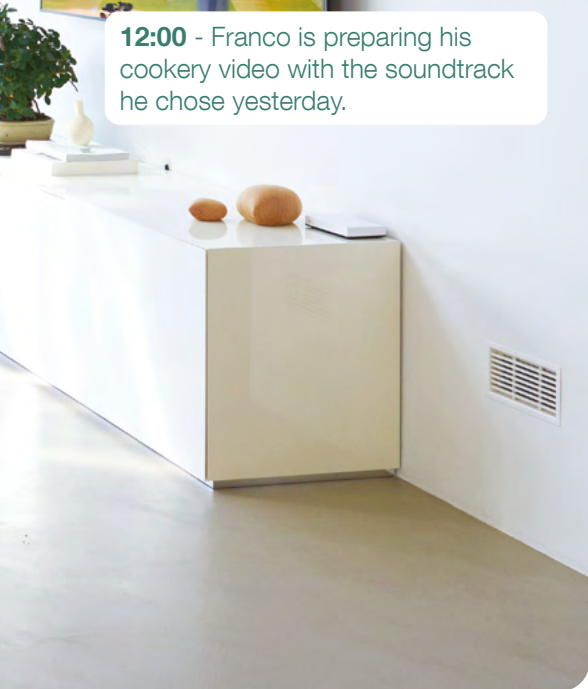

#activepeople

Make it easy to customise your space.

We've learnt to take care of ourselves and a little about changing the world: physical activity, healthy food, genuine habits.
Now it's time to turn family habits into personal habits: because everyone needs their own space and time.

15

Discover fluid spaces

The Nice smart home can also manage systems for your green spaces, including remotely, with a control that lets you adjust irrigation according to the actual weather conditions and keep your green areas flourishing with an environmentally friendly and consumption sensitive use of energy, even while you're travelling.

Awning control, to transform your outdoor space into a sheltered patio and keep your home cool without consuming energy.

**Sprinkler control,** to keep your lawn perfect even while you're on holiday.

#greenlovers

Indoors or outdoors? You can also transform your green spaces into living spaces.

We have a green soul: did you know that most of our outdoor automations can operate with their own solar panel?
Mara, Dino and their tribe of little mischiefs have chosen to live surrounded by green, with a super ecological house that doesn't compromise on the comfort of a simple, connected system, also perfect to manage the garden.

Gate control:
programme and manage your gate, without ruining the lawn. There's a solar panel to provide power and make it connected.

Nice

A front row show

We have designed our smart home system to enable the automations in your home to communicate with each other, allowing you to easily develop different scenarios to trigger a series of actions with a single command. So you can arrive home to be greeted by your favourite sound and diffuser essences, while the lights adjust to create the perfect relaxing atmosphere. While you're travelling, you can simulate the presence of people in your home by switching the lights and appliances on and off.

Lighting control, from dust to dawn, regulate the perfect light with a simple voice command.

Relaxation scenario, dim the lights, start the music and diffuse the essences.

I'm home scenario: open the gate, close the outside awnings, turn on the oven.

Garden lighting control, enjoy the colours of the leaves, or the reflections of the moon on the water under the right light.

#designers

Create and customise your scenarios so you feel you're the protagonist.

Turn your home into the perfect setting for every moment, from an Instagrammable aperitif to a romantic evening, playing with lights, sounds and ever-changing atmospheres. Because their home is part nest and part stage.

Nice

Design your light

For those who love the reflections of the night and want to wake up with the light of dawn: with our smart home system you can programme the night lighting with different scenarios, raising or lowering the rolling shutters and turning on the courtesy lights, or switching everything off to turn goodnight into a family ritual.
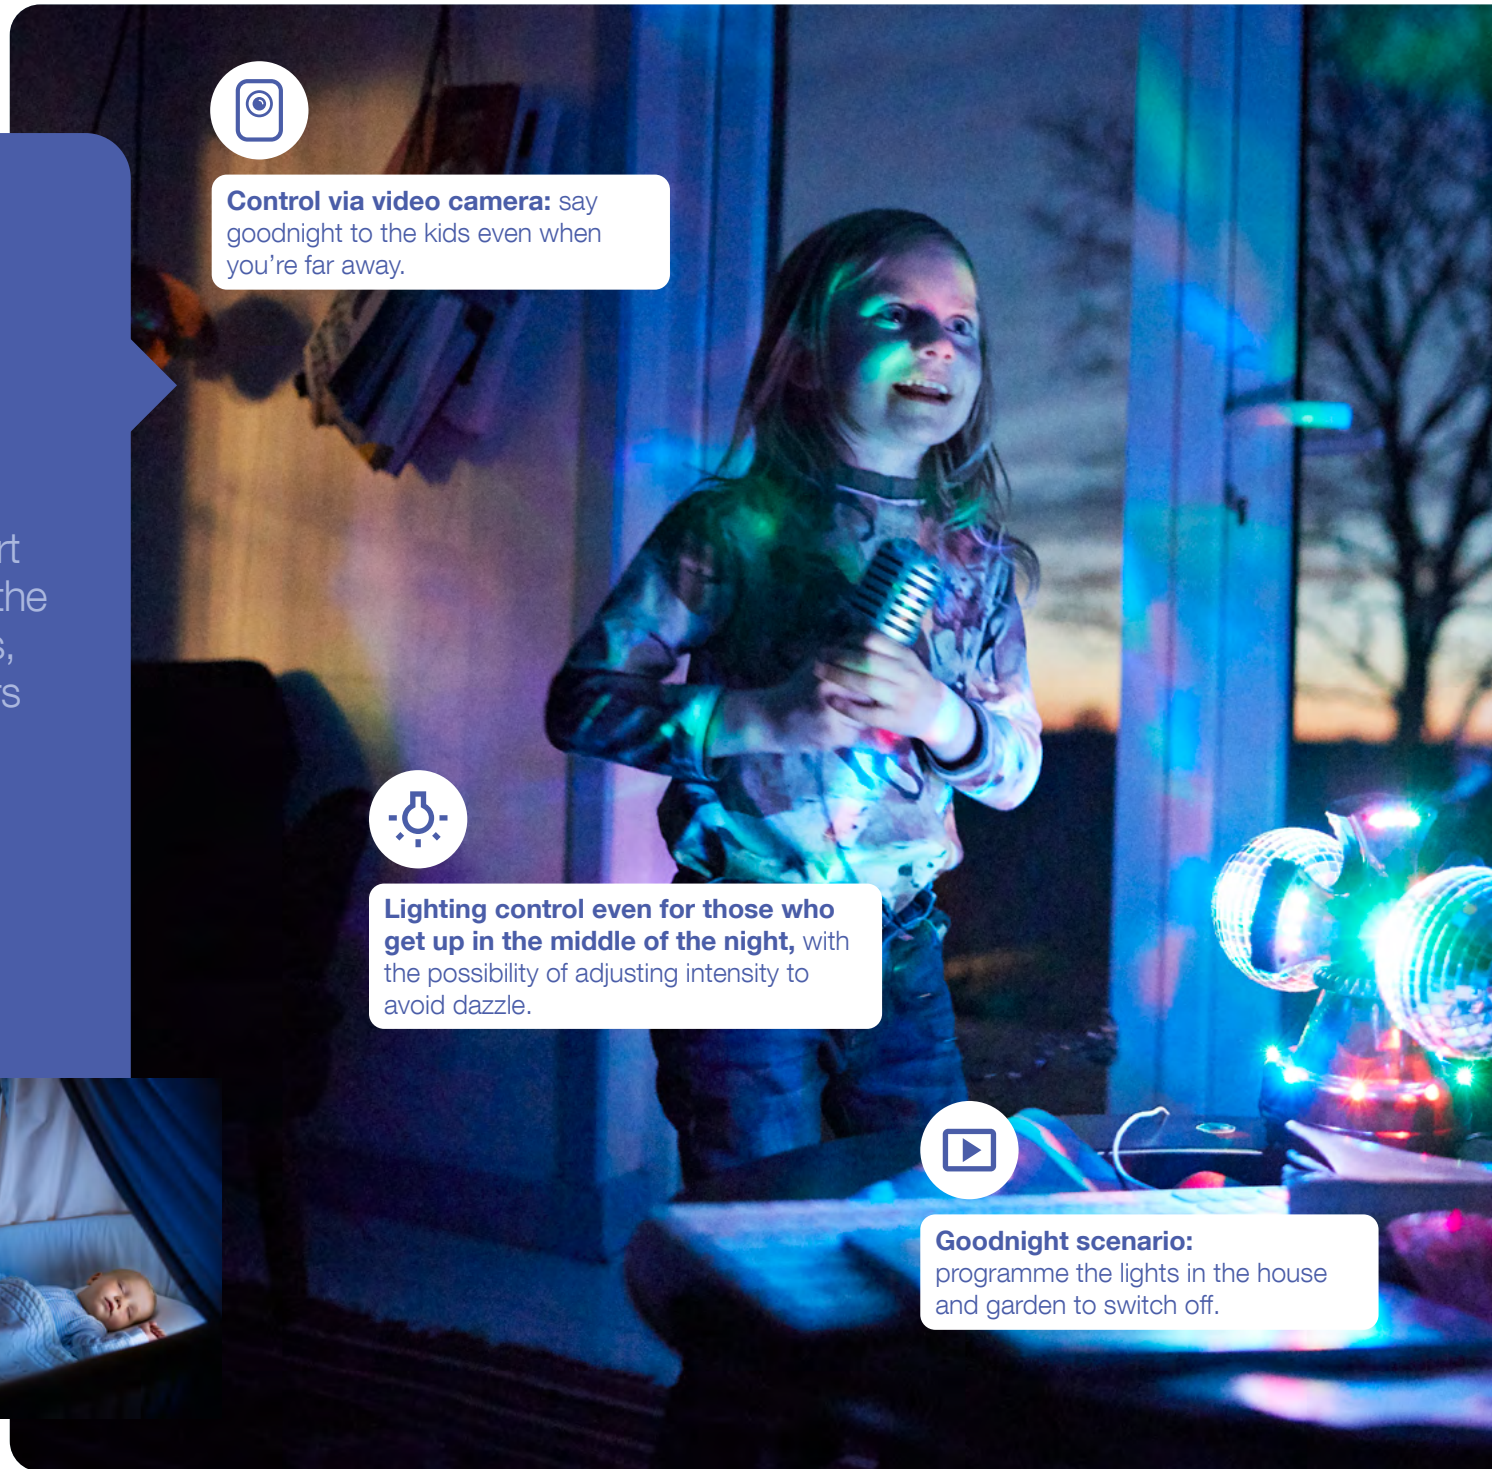

Control via video camera: say goodnight to the kids even when you're far away.

Lighting control even for those who get up in the middle of the night, with the possibility of adjusting intensity to avoid dazzle.

Goodnight scenario: programme the lights in the house and garden to switch off.

Rolling shutter control: lower the shutters with a click and turn bedtime into a ritual.

#lightmasters

Transform and programme your home lighting system.

There's magic in the light: it follows you from room to room, switching on and off as you enter and letting you adjust it so you can admire the colours of the sunset, the first stars, or the dance of the fireflies in the garden.
With its smart home system, Nice lets you manage the lights in your home and garden simply and easily, teaching even the youngest children the importance of saving energy.

Nice

Welcome to "our" home

The smart home system also lets you easily manage applications used by a number of people and dedicated to communal spaces such as in cohousing, offices and holiday homes: a single app to manage private spaces and control shared spaces safely and conveniently.
So together you can plan the atmosphere of a relaxed cohabitation packed with possibilities: surprise party tonight?

Lighting control: together it's easier to find good reasons to celebrate.
Turn the lights off with a single command for the most successful of surprise parties.

I'm home scenario: do you know how fantastic it is to open the gate before you turn the last corner?

Intrusion control: when there are a lot of people around, strangers could sneak in. But only those with smart home access can enter your spaces.

#partypeople

Lifestyles change, but peace of mind is always the same.

Have you chosen co-housing so you can live with friends while not compromising on your own spaces and silences?
You can adjust the scenarios of your home and plan the choices for the communal areas together with your cohousers.
So you're close, but never too close.

Garden lighting control: if the garden belongs to everyone, it's ultra-easy to control the lights, irrigation and timing.

The smart home according to Nice: your lifestyle becomes home.

Safe, efficient and comfortable: with the smart home system, the Nice experience becomes a personalised way of conceiving your home, able to adapt to your needs and transform them into a new sense of living.
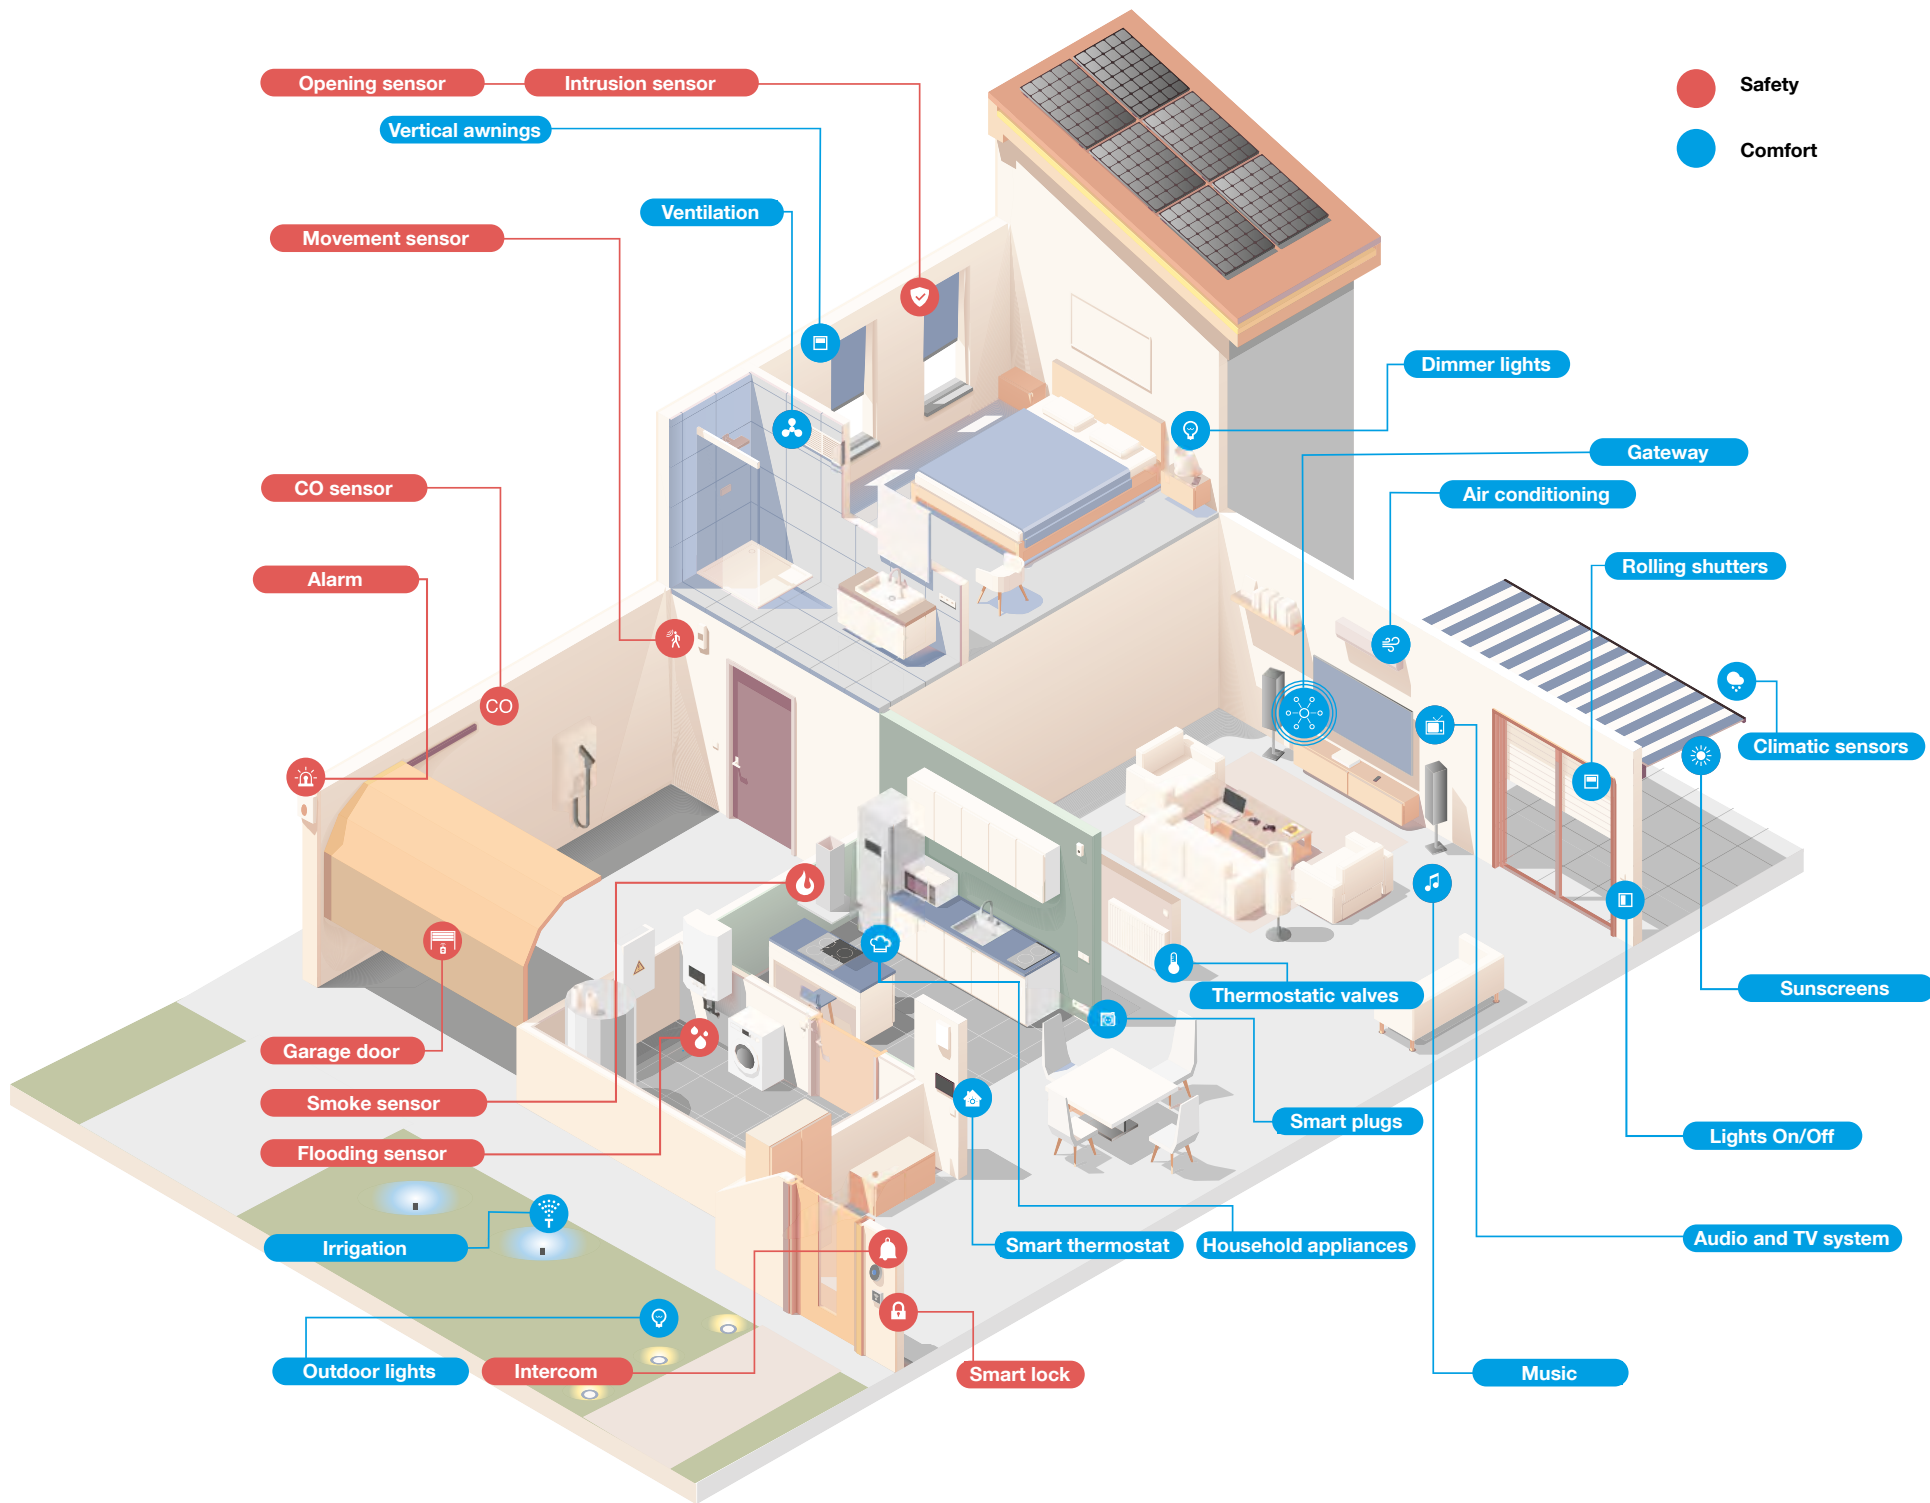

Spaces change, our systems can change.

Think of a connected home that can take care of the whole family and understand their habits. A house where all the automations are integrated in an open and constantly evolving system you can control and manage with maximum freedom, choosing the solutions best suited to your needs.

The world changes, our projects can evolve.

Think of a smart home able to adapt to changing circumstances and communicate with all your devices. Think of a home where you can add new automations and integrate them with those you already own, where controlling the details is transformed into scenarios you can programme, modulate and modify with a gesture.

Nice

Imagine your connected home.

The Connected You

Nice has created an advanced and customisable system for your smart home: these are just some of its uses, but you can modulate it according to your lifestyle and needs, integrating it with your existing automations, with the advice of a Nice installer.

Open, close and welcome with a gesture.
Do you want to control doors, gates and rolling shutters?

Good morning

When your alarm clock goes off, your blinds and rolling shutters will also bid you good morning, opening to the height you've chosen.
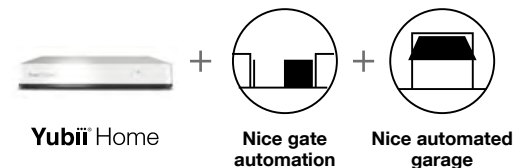

+ **Nice automated blinds** + **Nice automated rolling shutters**

Welcome back

Arrive home and find the gate open: thanks to geolocation, your home gate operates automatically according to your position.

Yubii Home + **Geolocation** + **Nice automated gate** + **Nice automated garage**

Without distractions, with just your voice

Don't take your hands off the steering wheel: open and close your gate with a simple voice command.

Yubii Home + **Nice gate automation** + **Nice automated garage**

### Who's ringing the doorbell?

Even if you're at work or away from home, you can open the door for that long-awaited parcel: the app shows you who has arrived and opening it just takes a single command.

Intercom + **Smartphone app** + **Automated gate**

Distant but safe.
# Do you want to protect your home?

Protect your home with a click

A single command is all you need to close your house and activate your burglar alarm and when you're away you can check the status of your automations and alarm system wherever you are.

MyNice control unit + **Smartphone app** + **Light** + **Automated gate and garage** + **Automated rolling shutters**

### Simulate a presence in the house

Create a holiday profile on your app and simulate the presence of people in the house by opening and closing the blinds and turning on the lights in random cycles.

Yubii Home + **Light** + **Automated blinds**

Be at your son's side discreetly.

Parental control

At the set time, the TV switches off, alerting your child with a light signal a few minutes earlier.
So you can control your kids TV time and teach them to be responsible.

**Yubii Home** + **Light** + **Television**

No darkness, no fear.

Are your kids afraid of the dark? Set the light in their room to turn off gradually and accompany them as they fall peacefully asleep.

Yubii Home + **Light**

27

Nice

Mix lights, sounds and effects.
## Want to create the ideal evening?

Relaxation time or party time

You create the scenarios and the smart home takes care of the rest: use your voice assistant to trigger the mix of the right music, dimmed lights in your favourite colour, aroma diffusers and blinds up or down.

Yubii Home + Voice assistant + Light + Audio system + Automated blinds

The ideal film screening

Create the perfect atmosphere for an evening film screening. A voice command is all it takes to turn on the TV, close the blinds and switch on the appropriate lighting.

Yubii Home + Voice assistant + Television + Automated blinds + Light

## Enjoy a danger-free home. For protection against fire, flooding and carbon monoxide.

No risk of flooding

The flooding sensor detects the presence of water in unexpected places and sends a signal to close the valve, even if you're not at home.

Yubii Home + Flooding sensor + Solenoid valve

Protection from invisible danger

If the concentrations of carbon monoxide in the air are too high, the CO sensor will alert you and activate the ventilation.

Yubii Home + CO Sensor + Ventilation

Perfect, effortless green.
# Do you want to take care of your terrace or garden?

Automatic or dynamic irrigation

Schedule your automatic irrigation for the days and times you prefer, or regulate irrigation of your garden according to the weather conditions where you live.

Yubii Home + **Irrigation system**
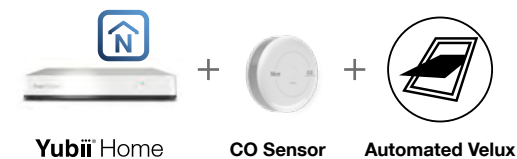

Managing your plants while on holiday

Going on holiday? Automatically regulate the light and water for the plants on your balcony.

Yubii Home + **Irrigation system** + **Automated awning**

Breathe pure air.
Do you want control CO?

Clean air at all times

We monitor air quality through the CO sensor and if the room needs ventilating, the system automatically opens the rolling shutters just enough to circulate the air

Yubii Home + **CO Sensor** + **Automated Velux**

Your green well-being. Do you want to manage lighting, cooling and heating?

Smart cooling control

Save energy and adjust functioning of your air conditioning according to the actual temperature in your room. If you open a window, the cooling will automatically switch off until you close it.

**Yubii Home** + **Climate** + **Motion sensor** + **Door/window sensor**

Smart heating control

To keep waste to a minimum, adjust functioning of your boiler according to the actual temperature in your room. If you open a window, the heating will automatically switch off until you close it.

Yubii Home + **Door/window sensor** + **Heat controller**

Smart lighting control

Use motion sensors to control the lights in your home to save energy and never get left in the dark. Sensors detect your movements and turn the lights on or off when you leave; if you get up at night, they follow you without dazzling you.

Yubii Home + **Motion sensor** + **Light**

Why Nice?

Because we think about the future.

Because we are very rigorous.

Because we believe in the value of design.

Behind all our projects is a story of the future.
We like to imagine the world we want for everyone: connected, fluid, safe and sustainable, we like to be able to transform our desires into easy-to-use, practical and modular automations.
We never lose sight of our primary objective: to transform everyday gestures into new habits that significantly improve the quality of living.

We put our projects through hell before they reach you.
We rigorously test each product, exposing it to the harshest conditions: from water to frost, dust, heat, shock, noise and radio waves. There is no test a Nice system has not been put through before you get your hands on it.
Because that way we can offer not only the world's most stringent certifications, but also our assurance that every home system will be safe, long-lasting and high-performance. In every situation.

We like to think we offer excellent content with fabulous design.
Think about it: automations are part of our everyday lives, they are always before our eyes and in our hands.
This is why for each product we conceive a simple, minimal design, pleasing right from the choice of materials and finishes, ergonomic so that even the shape makes it so easy to use, you'll come to believe it was designed with your needs in mind.

Because we all live on the same planet.

Because research is the key to the future.

Because we see training differently.

We want to take care of the planet and the people who live on it.
Sustainably improving the quality of life is one of our primary commitments. This is why our research focuses on environmentally friendly materials, reducing waste and developing solar energy systems and solutions that enable the smart use of light and heat.

We never stop researching and experimenting new solutions and new products.
The world is constantly changing and we know we want to be part of that change with the power of our imagination and the concrete work of our experts who every day imagine what tomorrow will be like and translate it into automations and systems conceived to make your life better.

Our installers know they are part of an integrated system.
Our training centre is an excellence for both face-to-face and distance learning and our installers can experiment with innovative technologies to programme, connect and manage your automation systems. Through our Nice professionals, we want you to feel our world is always at your side.

Nice

Would you like more information?
Read the smart home questions.

1. **Is it expensive to create a smart home system?**
   The Nice smart home system is plug and play, not wired, and that certainly makes it more accessible. In fact, its main distinctive feature is that it is modular and scalable.

2. **Does creating a smart home system entail building work?**
   No, a large part of our smart home consists of wireless devices; easy to integrate and transfer if you move house. It can also be easy to automate sunscreens or gates: contact a Nice installer to check if your home has the right characteristics for non-invasive installation of everything it takes.

3. **Is it cost-effective to create a smart home?**
   Absolutely yes. A Nice smart home system improves your home's consumption, saving you energy and significantly increasing the value of your property on the market.

4. **What is the best moment to implement a smart home system?**
   You can facilitate implementation by incorporating it into a building or renovation project so you can design your electrical installations accordingly. But the big advantage is that you can integrate the Nice smart home system at any moment.

5. **Does the smart home function with a wi-fi/internet connection?**
   The Nice smart home is designed to function even without the internet connection you'll need to control the automations remotely. Inside the house, your smart home does not need to be connected to function and your programmed scenarios will continue to work. You only need to be connected to internet to create new scenarios.

6. **Does my smart home system work without power?** Most Nice automations can be used manually even during a power failure; the sensors incorporate a battery so they can function

automatically. On the other hand, the tubular motors for blinds, awnings and lights need power to operate: if you want to be sure they will continue to function even in the event of a blackout, you need to install an uninterruptible power supply.

7. **Is the smart home compatible with my existing home devices?**
Most likely yes: the Nice smart home system is designed to be compatible with most devices on the market. If you want to be sure your device can be connected, contact an authorised installer.

8. **Is my data safe in the smart home?**
Absolutely yes: we pay great attention to safety, including the security of your data which is encrypted to keep it safe.

9. **Can I use my voice assistants with my smart home?** Of course you can: the Nice smart home system is designed so you can use the full potential of home systems such as Alexa and Google Home.

10. **Can I install Nice automations if I have children at home?**
Absolutely yes. Our automations can be programmed to help you manage your family and our devices are manufactured according to the strictest safety protocols: properly installed, they are safe and reliable.

11. **Is a smart home sustainable? Can we improve consumption?**
Definitely yes. The Nice smart home system controls energy consumption in the home, reducing waste and allowing you to manage all your automations autonomously and smartly. You can also avoid electrical overload by programming certain appliances to switch off if a preset consumption threshold is reached.

Nice

We are here for you

If you're looking for an installer you can trust, fill in the form indicating your needs and you'll be contacted by our network of experts.

We imagined the freedom to explore the world and turned it into a house-system.

Connected, integrated and customisable.
Safe and easy to use. The smart home system is
the Nice project that puts the way you want to live
at the centre of the automation.

Even when you're busy exploring the world.
